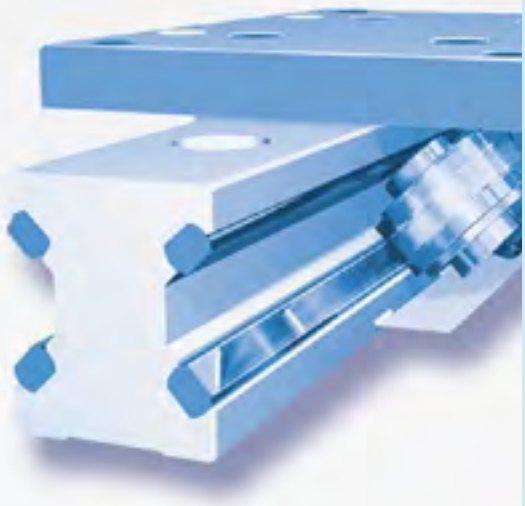
Antifriction wire race bearings

Linear guides



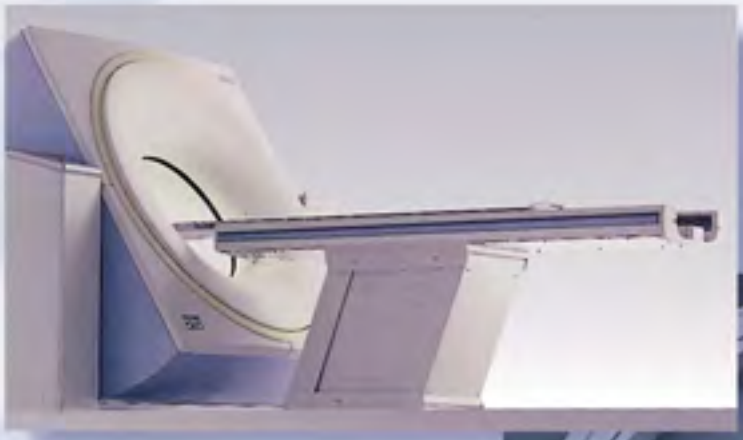
Positioning systems

Application samples antifriction bearings

Franke bearings have a proven track record in daily operation in numerous applications and markets. In all cases where the Franke bearing system is incorporated consequently into the design, cost effective solutions result.

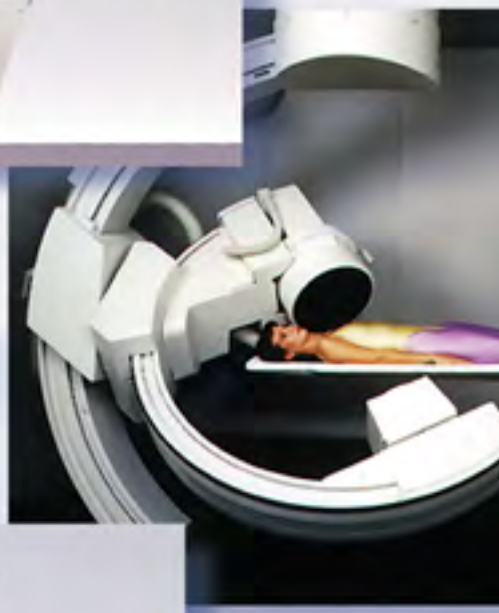
The special advantages of the bearings are the space saving design together with high load capacities for loads from whatever direction. The balls run on tough rings from spring steel which are embedded in the mating structure. Load capacity and running behaviour are therefore independent from the material of the mating structure, giving the machine designer a wide range of materials from which to choose.

Numerous series add up to a wide selection range from the LowCost version to slim bearings and special solutions such as our angular ball bearings for CT-scanners.



The computer tomograph is equipped with a low-noise Franke bearing.This patented bearing was developed particularly for this purpose; its special merits are very smooth and silent running, low current consumption, and high precision.

(Photo Siemens)



Franke bearing assembly supporting an x-ray apparatus. Both C-arms of the x-ray apparatus are resting on a swivelling bearing assembly. We supply the bearing assemblies complete with gears.

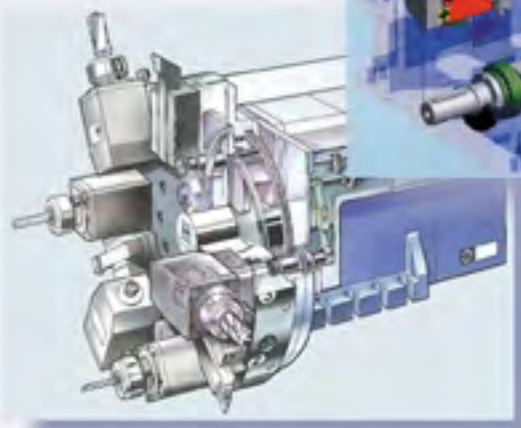
(Photo Siemens)

Franke bearing elements in a vacuum-filler in food industries. Due to the space saving design and low prices the vacuum-filler can be designed small and economical.

(Photo Schnell)

Franke bearing element in an indexing table. High moment loads under rough conditions.

(Photo Taktomat)



Franke- bearing elements in a tool changing device. Small mounting span and high capacity

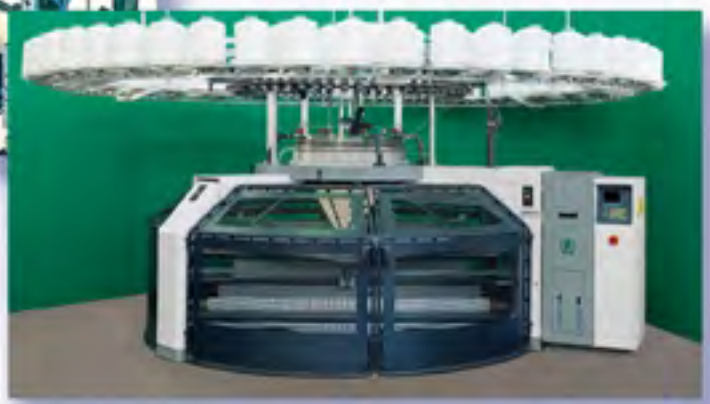
(Photo Sauter)

Franke bearing elements in a medical ceiling system. Easy manual swivelling movements in spite of heavy loads.

(Photo Pneumatik)

Franke bearing assembly in a welding machine. High radial and axial accuracy for best welding results.

(Photo Nothelfer)



Circular knitting machine. The Franke bearing assembly has an excellent adaptability to changing thermal conditions, thus allowing high speeds with low energy consumption.

Series		Features
Bearing elements	LEL 	*the Universal* Ground raceways made of spring steel for highest loads and accuracy.
	LER 	*the Economical* Rectangular profil with drawn raceways for easy machining of the mating structure and low price.
	LED 	*the Double profiled* Either ground or drawn raceways for high loads and precision, very cost-effective.
	LDD 	*the Easy-to-mount* Slim bearings with metal sleeves for easy mounting in one piece. Ground raceways for high loads and high precision.
Bearing assemblies	LDL 	*the Ready-to-use* Complete bearing assembly with seal on both sides, ground raceways for high loads and precision.
	LDV 	*the Preferential* Complete bearing assembly with seal on top and rectangular raceways with drawn surface, very cost-effective.
	LDF 	*the Silent* Complete bearing assembly with bearing element embedded in elastomer for very smooth and silent run.
	LDS 	*the Special* Complete bearing assembly in customized design to match the special requests of the customer such as noise reduction, high revolutions, high accuracy.

Bearing assemblies as low noise bearing

Your benefit:

High load capacity
Silent running
Low structure-borne noise
Free selection of dimensions
Choice of different versions

Series LDS

Bearing assemblies of the low noise type and double row angular bearings are bearings which are ready for installation meeting even the highest requirements concerning easy run, low noise and precision.
In the last few years we have supplied more than 5000 central bearings for computer tomographs worldwide. All the famous manufacturers from this branch have realized the advantages of the Franke system and are using them consequently.
Here we can give you only a short survey on the different bearing types. The application possibilities are too versatile, the desires are too different.

All dimensions (height, width, bore configuration, etc.) are determined according to the customer's desires and requirements. We produce antifriction bearings of these types in the diameters from 500 - 1600 mm.

Two-sided elastomer bearing

The development of this bearing was aimed at obtaining very silent run and low structure-borne noise. For this purpose the race rings were manufactured with high surface quality and embedded in an elastomer. The rotational resistance was adjusted according to the application.

This invention was patented. The bearing proved to be successful in the CT sector and is suitable for speeds up to 6m/s The inner ring is electrically insulated against the outer ring.

One-sided elastomer bearing (hybrid bearing)

This bearing was developed on the basis of the low-noise bearing but it differs from that by its additional stiffness. Regarding smooth and silent run both bearings are nearly equal. The hybrid bearing is mainly used in cases where high loads and moments are to be sustained. The inner ring is electrically insulated against the outer ring.

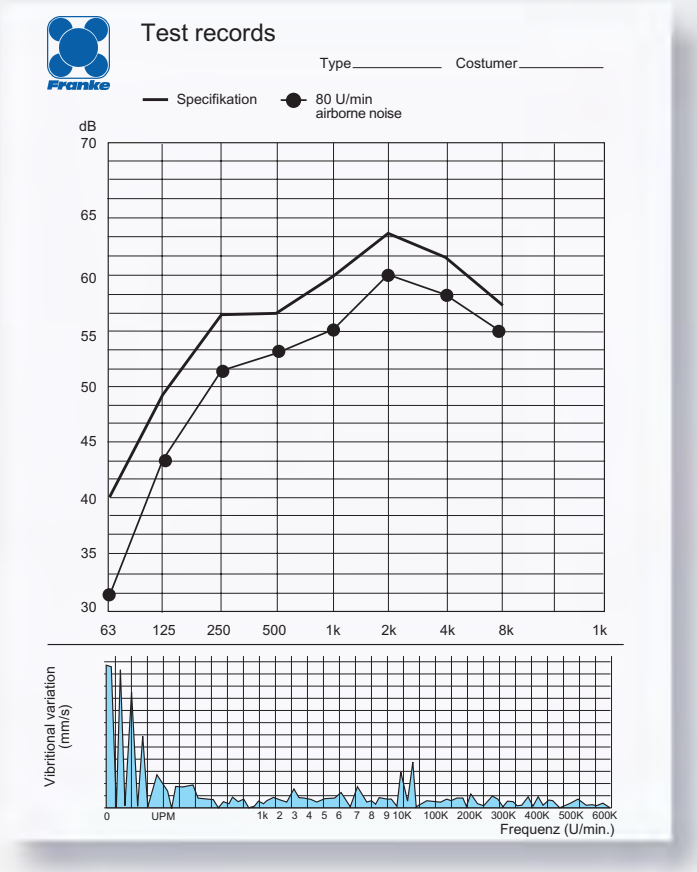
Bearing assembly as double row angular ball bearing

We supply all data according to specification.

RPMs, radial and axial accuracy as well as airborne and structure-borne noise can be documented and supplied with each bearing.

On request our bearings are tested in longtime run, here stiffness against tilt and lifetime are investigated. In addition we make detailed calculations.

Please benefit from our 50 years' experience in the production of antifriction bearings.



Angular ball bearing compact design

Especially for small mounting space we recommend our new compact designed angular ball bearing. With a cross section of 1x2 inches it meets the dimensions of standard bearings and combines high stiffness and precision with silent running even with high revolution.

In all applications where usually two bearings are required to take the loads and moments our new compact bearings can replace them both.

Angular ball bearing standard

The double row angular ball bearing was developed for CTs with high RPMs. Here 2 rows of balls are running in a defined way. The friction conditions are especially favourable and the bearings are particularly stiff and free from clearance even in the tilted condition.

This bearing type meets very high demands for precison and low running noise.

Angular ball bearing with elastomer inlay

We made good experience with the elastomer inlay from which we want to benefit also for the angular ball bearing. The loudness level was even more reduced by the elastomer, the same is true for the structure-borne noise.

The elastomer is used in the stationary ring. The inner ring is electrically isolated against the outer ring.

Particular bearing assemblies

Your benefit:

High load rating
High load capacity for loads from any direction
Toothed module custom-made
On request with driving worm

Franke bearing assemblies with gear are used in versatile fields of application. On request we supply our bearing assemblies with inner or outer gear as standard module or according to your indications.

Bearing assemblies with gear can be made of diverse materials. The dynamic and static loads determine the choice of the material as well as the kind of finishing or heat treatment of the bearing rings.

We make bearing rings with gear either of steel C45N or 42CrMo4V. Any other materials are possible on request.

Module, number of teeth, material, and heat treatment as well as any other special manufacturing details are determined by the field of application and the force which has to be transmitted.

The bearing assembly shown in this picture is used in a C-bow x-ray device where the radiation arm is slewing around the patient. We supply the complete bearing inclusive the driving worm.

Alternative materials

Your benefit:

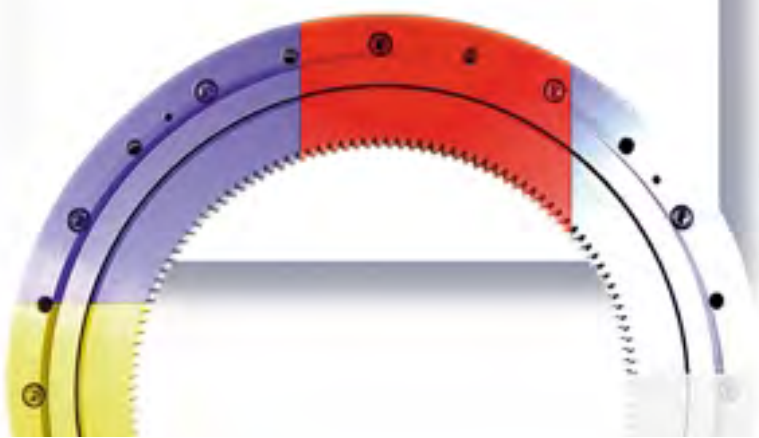
Adaptation to your design
Special material features
(light construction, non-corrosive steel etc.)
High load rating and precision independent from the material chosen

Bearing assemblies

Version	Material	Suited for
Standard	C45N	almost all application in the construction of machines and devices
Gear	42CrMo4V	Bearing assembly with driving worm and pinion
Alumunium	AlZnMgCu0,5	Light construction and homogenous application of material in an aluminium environment
Stainless steel	X5CrNi18.10	for corrosive environment and in the food industry
Diverse alloys	e.g. GZ-CuSn12	Highest precision requirements
Plastic	Diverse Materias	Applications with high requirements for light construction and corrosionresistance

Bearing elements

Version	Material	Suited for
Standard 54SiCr6	Fedra Sorte C,	Nearly all applications in the construction of machines and devices
Niro	X12CrNi177 X7CrNi177	for corrosive environment as well as in the food industry
Duratherm	600F1450	High-vaccuum



On request Franke bearing assemblies are available in diverse materials. This allows to select the compound which is most suited to your construction.

Precision and load rating of the selected bearing are to a high degree independent from the material which was chosen for the mating structure. This becomes possible due to the Franke system where the rolling elements run on tough ground race rings.

This guarantees high performance under any condition of application. Whether you chose non-corrosive steel, antimagnetical material or material which is suited for clean-room conditions or for the food indystry: Franke bearing assemblies can be adapted to all requirements.

Please consult us, we are gladly prepared to advice you.

For example non-corrosive steel:

Corrosion resitant bearing assem-blies for the appplication in an especially humid environment.

For example aluminium:

Light bearing rings for light-weight design.

For example bronze:

High-strength alloys for very high precision and fatigue resistance.

For example plastic:

Bearing rings of penetration-dyed plastic for the optical adaptation of the bearing to special materials (e.g. glass fibre, coil fibre, etc.)

Bearing elements

Dimensions [mm], * DIN ISO 286

Consists of:
- Four ball race rings with ground raceways
- Segmented strip cage with retained balls

Features:
- Direct integration into your mating structure
- Free selection of ball pitch
- Smallest mounting space and high precision
- Best radial and axial accuracy
- Calculation programm to find the best suitable bearing

Our calculation programm can be found in the download area of our homepage www.franke-gmbh.com. We are gladly prepared to calculate the bearing size for you

Ball race rings:
- Standard diameters from 1,5 to 6mm
- Special diameters up to 22 mm

For special applications other race ring diameters or race rings without raceways are also available. Please consult us.

Rolling elements:
- Steel balls DIN5401, class III

Strip cage:
- Ball guided polyamide ball cage divided into segments

The segmented strip cage runs very smooth and silent and equalizes length differences caused by high temperatures. The number of segments refers to the ball pitch diameter. For special applications and temperatures higher than 120° C we recommend ball cages made of non-corrosive steel or brass.

Lubrication:
- with ball bearing grease. For more information see page 27.

Temperature:
- Continuous operation: -40° C to +100° C, short time operation max. 120° C

Other temperatures on request

Adjustment:
- By plane surface
- By washers (see page 25)

The preload is adjusted correct when the rotational resistance without seal corresponds to table 1 (temperature range -40° C to +100° C).

Circumferrential speed:
- with grease lubrication max. 10 m/s
- with oil lubrication max. 12 m/s

Dimensions [mm], * DIN ISO 286

Consists of:
- Four ball race rings with rectangular raceways
- Segmented strip cage with retained balls

Features:
- Direkt integration into your mating structure
- Free selection of ball pitch
- Smallest mounting space and high precision
- Easy machining of the mating structure
- Calculation programm to find the best suitable bearing

Our calculation programm can be found in the download area of our homepage www.franke-gmbh.com. We are gladly prepared to calculate the bearing size for you

Ball race rings:
- Rectangular profile 4 x 3 mm
- Drawn raceways

For special applications other race ring diameters are also available. Please consult us.

Rolling elements:
- Steel balls DIN5401, class III

Strip cage:
- Ball guided polyamide ball cage divided into segments

The segmented strip cage runs very smooth and silent and equalizes length differences caused by high temperatures. The number of segments refers to the ball pitch diameter. For special applications and temperatures higher than 120° C we recommend ball cages made of non-corrosive steel or brass.

Lubrication:
- with ball bearing grease. For more information see page 27.

Temperature:
- Continuous operation: -40° C to +100° C, short time operation max. 120° C

Other temperatures on request

Adjustment:
- By plane surface
- By washers (see page 25)

The preload is adjusted correct when the rotational resistance without seal corresponds to table 1 (temperature range -40° C to +100° C).

Circumferrential speed:
- with grease lubrication max. 10 m/s
- with oil lubrication max. 12 m/s

Dimensions [mm], Moments [Nm]

Consists of:
- Two metal sleeves that hold the bearing
- Four ball race rings with ground raceways
- Segmented strip cage with retained balls

Features:
- Direct integration into your mating structure
- Easy mounting of the machine structure
- Smallest mounting space and high precision
- Calculation programm to find the best suitable bearing

Our calculation programm can be found in the download area of our homepage www.franke-gmbh.com. We are gladly prepared to calculate the bearing size for you

Sleeves:
- ready-to-mount bearing elements with inner and outer sleeve

Rolling elements:
- Steel balls DIN5401, class III

Strip cage:
- Ball guided polyamide ball cage divided into segments

The segmented strip cage runs very smooth and silent and equalizes length differences caused by high temperatures. The number of segments refers to the ball pitch diameter. For special applications and temperatures higher than 120°C we recommend ball cages made of non-corrosive steel or brass.

Lubrication:
- with ball bearing grease. For more information see page 27.

Temperature:
- Continuous operation: -10°C to +70°C, short time operation max. 120° C

Other temperatures on request

Adjustment:
- By plane surface
- By washers (see page 25)

The preload is adjusted correct when the rotational resistance without seal corresponds to table 1 (temperature range -40° C to +100° C).

Circumferrential speed:
- with grease lubrication max. 10 m/s
- with oil lubrication max. 12 m/s

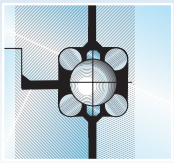
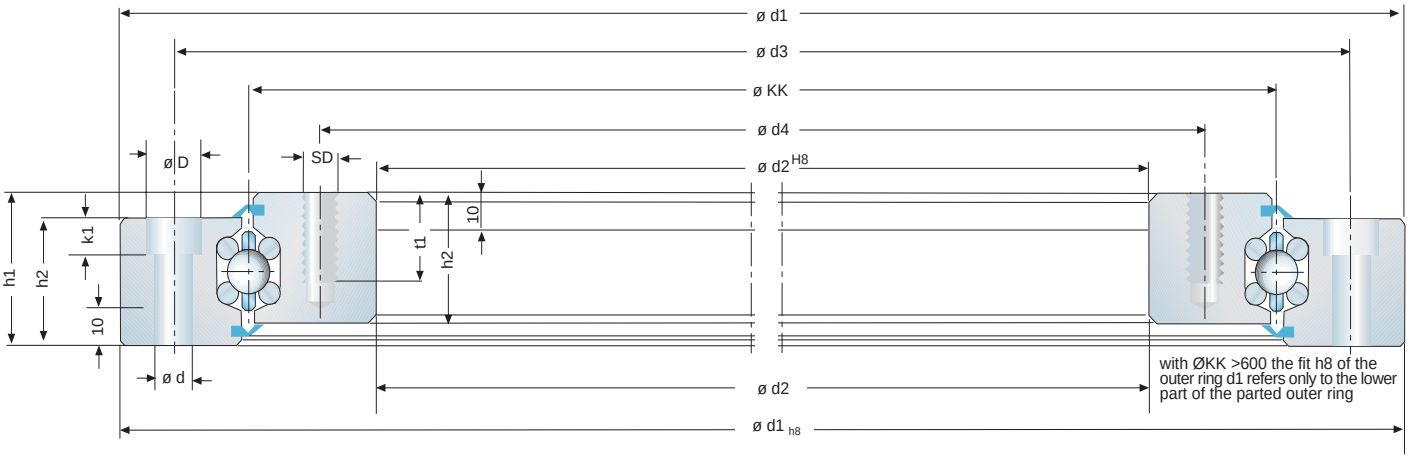
Bearing assemblies

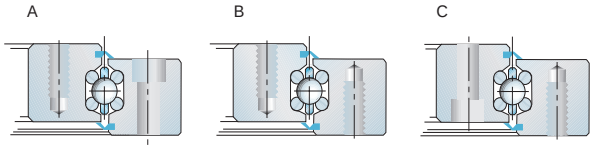
Steel version



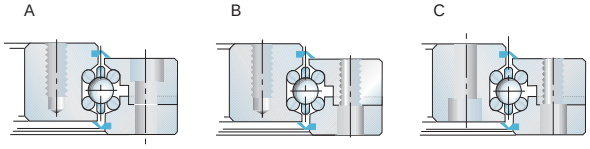
Series LDL



Bore shape: Ø KK 100 - 600 mm



Bore shape: Ø KK > 600 mm



Consists of:
- Inner and outer ring of steel
- Bearing element with ground raceways
- Seal on both sides of the bearing
- optional with inner or outer gear

Features:
- ready-to-mount bearing assembly
- free selection of material and coating
- free selection of bearing geometrie
- free selection of bore shape
- free selection of gear from 60 to 1600mm
- highest radial and axial accuracy with max. stiffness
- specified rotational resistance ex works
- rotational resistance adjustable from clearance to preload
- calculation programm to find the best suitable bearing

Our calculation programm can be found in the download area of our homepage www.franke-gmbh.com. We are gladly prepared to calculate the bearing size for you

Lubrication:
- with ball bearing grease. For more information see page 27.

Temperature:
- Standard:Continuous operation: -30°C to +80°C, short time operation max. 100°C
- Optional: Continous operation -30°C to +180°C

Please consult us

Adjustment:
- Preload ex works (see diagram 1)

Circumferrential speed:
- with seal max. 10 m/s
- without seal max. 12 m/s

Gear:
- Standard see page 23
- optional: tooth belt gear, worm gear, angular gear, etc.

Please consult us

Dimensions [mm], Weight [kg] * DIN ISO 286

Consists of:
- Inner and outer ring of steel
- Bearing element series LER (see page 14)
- Seal on upper side of the bearing

Features:
- ready-to-mount bearing assembly
- three diameters available from stock
- standard bore shape
- highest stiffness
- cost effective
- with serial request also available in other diameters
- with serial request also available in other material
- calculation programm to find the best suitable bearing

Our calculation programm can be found in the download area of our homepage www.franke-gmbh.com. We are gladly prepared to calculate the bearing size for you

Lubrication:
- with ball bearing grease. For more information see page 27.

Temperature:
- Standard:Continuous operation: -30°C to +80°C, short time operation max. 100°C
- Optional: Continous operation -30°C to +180°C

Please consult us

Adjustment:
- Preload ex works (see diagram 1) via thread ring

Circumferrential speed:
- with seal max. 10 m/s
- without seal max. 12 m/s

Dimensions [mm]

The strip cage consists of wear resistant HD polyamide. It is suitable for high circumferential speeds for bearings with horizontal and vertical axis of rotation. We supply strip cages ready for installation equipped with balls. The required number of balls is calculated as follows:

$$Z = \left[\frac{ØKK \cdot \pi}{t} \right] -1$$

Z = Number of balls
KK Ø = Ball pitch diameter
t = Ball spacing

The number of segments depends on the diameter of the bearing and on the ball size. The reference values are:

KKØ	< 200	200-399	400-799	800-1500
Anzahl Segmente	3-4	4-6	6-8	8-12

For special applications the cage can be delivered in one piece.

Dimensions [mm], Weight [kg]

Franke bearing assemblies are equipped with the S10-seal.

To use seal with bearing elements you may order the seal by meter. To glue the seal ends we recommend Loctite 401®.

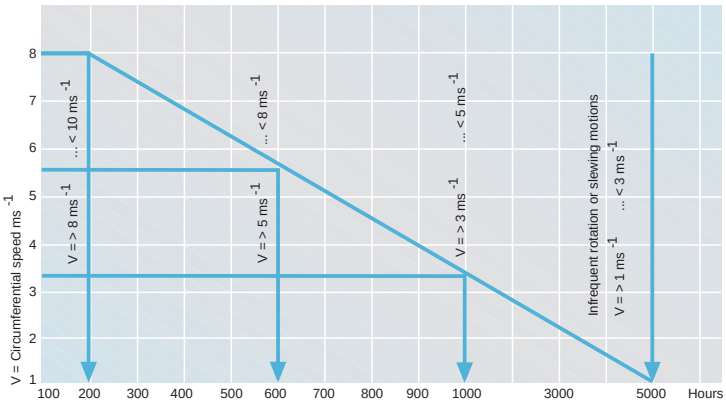
Lubrication

Sufficient lubrication should always be ensured in order to keep the friction low and to prevent the bearing from corrosion especially in the long run. Competely synthetic greases should be preferred for long time lubrication because their resistance against ageing is increased. We reommend ISOFLEX TOPAS NCA 52 (completely synthetic lubricating grease from the firm of KLÜBER), which we are using as standard lubricant. As alternative we recommend high-grade lithium soap greases on the basis of mineral oils. The consistency of the lubricants concerning basic oil, thickener, basic oil viscosity, and NLGI class has to be ensured in all cases where the lubricants are mixed up. Where extreme operating conditions or extraordinary operating parameters occur (e.g. speed, maximum temperature, radiation, vacuum) we recommend you to consult us or a grease producer.

Filling quantity with first lubrication: The necessary grease quantity (related to the RPM) in a bearing which is filled correctly is shown automatically when the overdose can be taken by the free space. The grease quantity is determined by the RPM. Grease filling of approx. 30 - 40% of the free space is correct for RPMs according to the parameter (n.KK diam.) < 90,000 min^{-1}. With slow rotations and slewing motions a higher filling percentage is possible. Lubrication of approx. 20-30% has to be applied with RPMs > 90,000 min^{-1}. This graduation is made in order to allow for the worked friction of the grease. Ex works the standard bearings are greased with a percentage of 20-30% of the free space.

Lubrication periods: Generally after 1000 operating hours relubrication is necessary for circumferential speeds between 3 and 5 m/s (see table). Reference values for relubrication periods with bearing temperature between 30° and 50° C approximately:



The operating conditions are varying strongly which is dependent on the different fields of application, therefore we recommend you to find out the necessary periods for relubrication by experiments and lubricant analyses which will help you to reduce the maintenance cost.

Longer relubrication periods are permissible for slewing and angular motions. Where single or infrequent movements are effected the relubrication period can be determined according to the ageing resistance of the lubricant. Relubrication is indispensable before and after relatively long periods out of operation. In our experience the relubrication period of lubricants based on refined oil is reduced to half of the initial value every 15°C, starting from an operating temperature of 70°C.

Relubrication quantity: For our standard bearings (Series LDL) the relubrication quantity can be calculated according to the following thumbrule:

$$m\ [gramm] = KK\ [mm] \cdot \frac{h2}{3}\ [mm] \cdot x$$

KK represents the mean bearing diameter, h2 the height of the bearing ring.

The factor x can be taken from the following table:

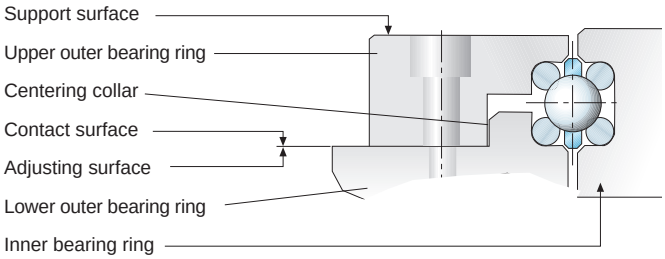
x	0,002	0,003	0,004	0,005
Relubrification	weekly	monthly	every year	every 2-3 years

1. Adjustment of the bearing clearance

1.1 Bearing elements

a) Solid adjustment

With 4-point contact bearings one of the contacting faces of the parted inner or outer rings is provided as adjusting surface.This mating surface has to be dimensioned by grinding (or turning), therefore the centering collar has to be attached to the contact surface. The contact surface on the opposite side of the adjusting surface is not allowed to show any runout in relation to the race ring beds.



b) Adjustment by washers

Washers between the parted inner or outer ring simplify the adjustment. We supply washers made of non-corrosive steel sheet in various dimensions (see accessories page 22).

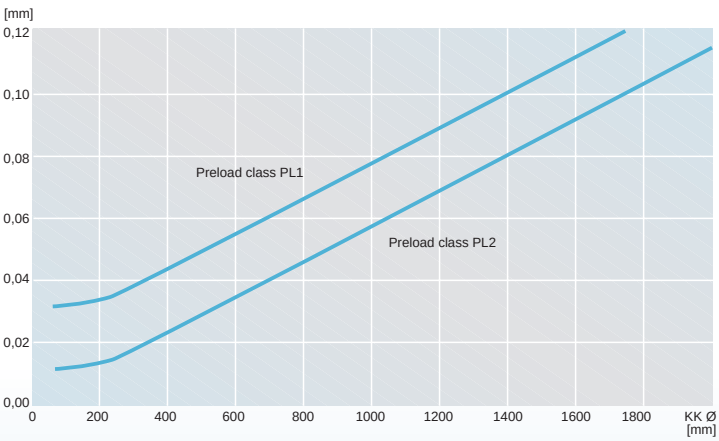
1.2 Slim bearings, low noise bearings

Franke slim bearings and low noise bearings are also available in diverse versions from clearance to preload. Primary pre-condition to reach precise geometry of the clearance is to keep the dimensionsional and shape tolerances which we recommend for shaft and housing seat. In addition sufficient strength of the shape of the adjusting rings has to be kept which is normally obtained by a screw arrangement which ensures high safety against changing operating forces. The third factor is precise observance of the axial mounting dimensions, which are not allowed to differ by more than 0.02 mm related to the total cirdumference on the same bearing ring. Adjustment of the low noise bearing is effected by the adjusting surface (solid adjustment) or by washers. With the slim bearing the mounting dimension can also be reached by adjustment. For applications beyond the proposed classes of preload adjustment can be reached by washers in a limited range. Please consult us.

The choice of the class of preload depends on kind of loading, speed, and the required plane and axial accuracy. We offer two classes of preload:

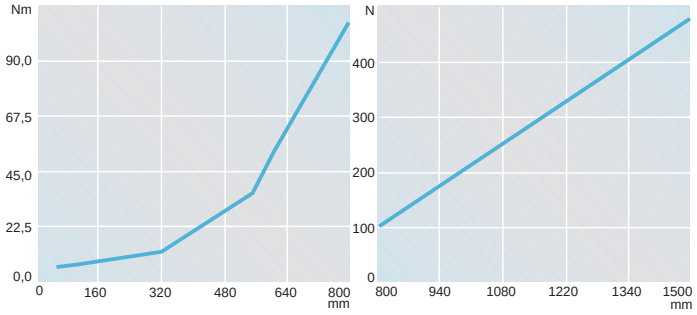
Class PL1 static safety SST > 15 and V > 6 ms-1

Class PL2 static safety SST > 6,5 up to ≤ 15 and V ≤ 6 ms-1



1.3 Bearing assemblies

Franke bearing assemblies of the selection series are adjusted in a range of clearance from 0.02 mm to preload. The amount of preload is limited by the torque according to the following diagram.



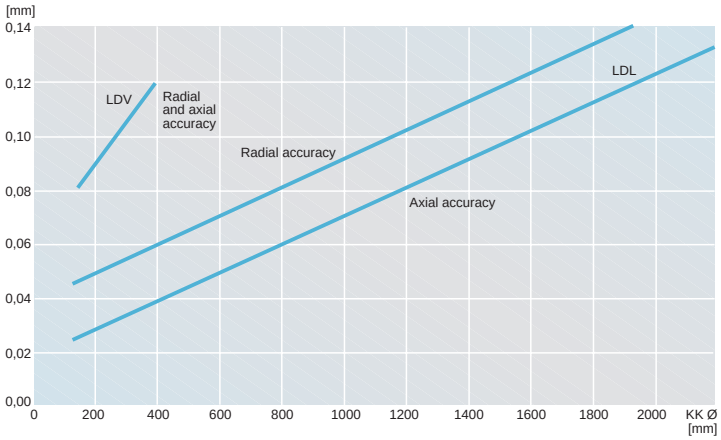
2. Special adjustment

The special design of Franke antifriction bearings allows sensible adjustment (3-ring-bearing). Bearing clearance and preload depend essentially on the application of the bearing.
The permissible limiting values depend on the respective stress conditions. Please consult us.

3. Running accuracy

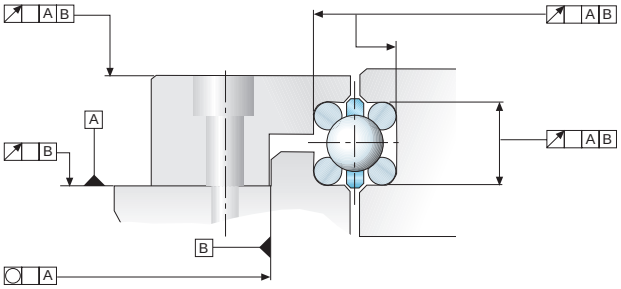
The following diagram shows the precision range which applies to the bearing assemblies of our selection series. In special cases where these values are not sufficient we can supply special bearings with higher precision.

With Franke bearing elements, slim bearings and low-noise bearings similar accuracies are possible. Please request.



4. Radial / axial runout

Easy running, high operating accuracy, high carrying capacity and long life are the most significant features of Franke bearings. This presupposes exact machining of every supporting ring and careful assembly of the bearing.



Precise machining of the structural parts mating to the Franke bearing is an indispensable precondition for troublefree functioning of the bearing. The grooves where the bearing rings resp. elements rest have to be even and accurate to shape and dimension. This requires that the cross sections of the mating structure are sufficiently strong to shape and design. The radial and axial errors of all diameters and faces which are correlated to each other shoud be as small as possible. Depending on the type the max. permissible error should be less or equal to the difference betweeen the total of errors and the expected running accuracy of the mounted bearing.

The optimum precision is obtained where the mating structural parts are designed in such a way that machining of all diameters and faces which are correlated to each other can be made in one chucking.

5. Hints for design and mounting

5.1 Bearing elements

a) General note

Like any other high-grade machine component Franke bearing elements require careful handling during transport and assembly. Transport and stockage should be effected in horizontal position. Shocks especially in radial direction have to be avoided.

b) Gap on the race ring

The race rings are left open. The gap at the joint should not exceed 1/3 of the bearing cross section when the race ring is inserted.

c) Mounting the race rings

A thin layer of grease applied to the race ring bed can serve to keep the one-or multipiece race rings in their desired position.When inserting the race rings it has to be ensured that the joints are offset by approx. 90 °.

Please observe our mounting and maintenance instructions which are enclosed to the delivery.

5.2 Slim bearings

Contrary to the closed and ground slim bearings which are usual in trade the operating clearance of the Franke slim bearings does not depend on the fit of the bearing seat of the inner or outer bearing ring.

Therefore mounting and dismantling is easier and does not require any special tools or thermal measures to be taken. With Franke slim bearings the axial preload of the inner and outer ring is the variable factor which is determined according to the provided kind of operation. Also the geometric adaption behaviour of the mating parts during the running in period is made allowance for.

Correct observance of the required tolerances when grinding and turning has a positive influence on the firm fit of the bearing on the shaft or within the housing. The real error has only little influence on operating clearance and rotational resistance during the subsequent adjusting process.

5.3 Bearing assemblies

When mounting Franke bearing assemblies some important hints should be observed.

Check the mating surface of the enclosing structure for evenness. Put the bearing on the screw-on surface and check the screws for smooth rotation. Take care that the surface is clean.

Fastening of the bearing to the mating structure should be effected gradually and crosswise with a torque wrench. With this the permissible tightening torques are to be kept. Should the rotational resistance be increased after mounting at an inacceptable rate this is often a consequence of uneven plane surfaces of the mating structure. For securing the screwed connections we recommend you to use appropriate securing means.

6. Screwed connections

Fastening of the complete bearing assembly to the mating structure is made by the bores which are indicated in our selection series. Number and dimensions are shown in the respective tables. To secure the screwed connections we recommend you to use appropriate securing means.

Tightening torque of screws

	Quality	
	8.8 [Nm]	**12.9 [Nm]**
M6	10	17
M8	25	41
M10	49	85
M12	86	145
M16	210	355

7. Circumferential speed

The permissible limiting speed is with

grease lubrication	10m/s
oil lubrication	12m/s
2row angular ball bearing	18m/s

8. Seal

Seals shall protect the beraring system against the penetration of contamination and prevent the lubricant from leaking. Franke bearing assemblies of the standard series are equipped with seals. They work troublefree up to a speed of 5m/s.

In addition we ask you to observe our mounting and maintenance instructions which are enclosed to every consignment.

Application samples Linear Guides

Aluminium roller guides are available in various series. You can select the series that suits your application best.

Due to the modular design the components of the different series can be combined individually.

With serial request we also offer customized cassettes.

All series and sizes are available as double rails with cassettes or as single rails with roller shoes.

Provisioning unit for medical equipment. The Franke aluminium roller guide produces easy and silent displacement.

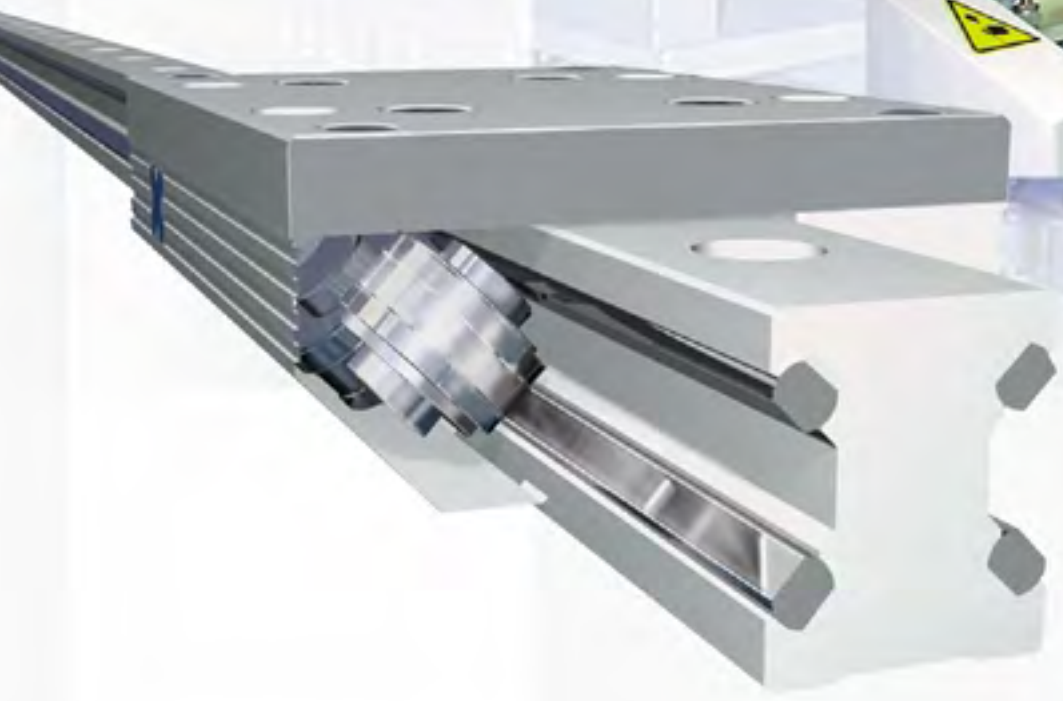
(Photo Dräger)

Take down pusher in a packing machine for mattresses. The rolled mattresses are pressed out of the drum with a pressure of 1.5 t. Aluminium roller guides provide the precise movement of the pusher.

(Photo Fillmatic)

Embroidery automate with movable embroidery frames. The aluminium roller guide moves in short strokes with high frequency, thus allowing detailed embroidery patterns.

(Photo Eisele)



Franke aluminium roller guide in a packaging machine for quick and easy handling of boxes.

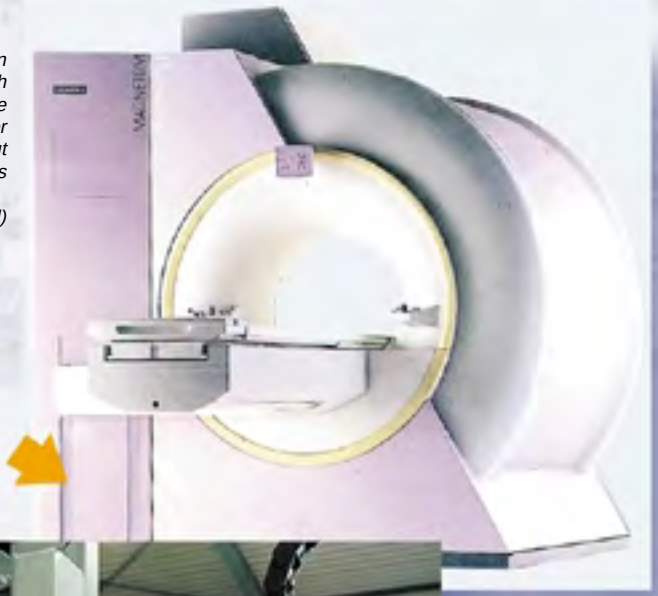
(Photo Schäfer & Flottmann)

Aluminium roller guide in a glasses engraving machine. Work piece carrier and the motorized coordinate tables are equipped with roller guides. The very good running behaviour and precision of the installation allows extremely fine engraving.

(Photo Kasch)

Aluminium roller guides in the lifting pillar of a patient couch of a magnetic resonance tomograph.The antimagnetic roller guides work without influence on the measuring results

(Photo Blancomed)



Handling device for paper stacks. The aluminium roller guides move jigs and stops reliably in permanent operation.

(Photo Solms)

Application samples Linear Guides

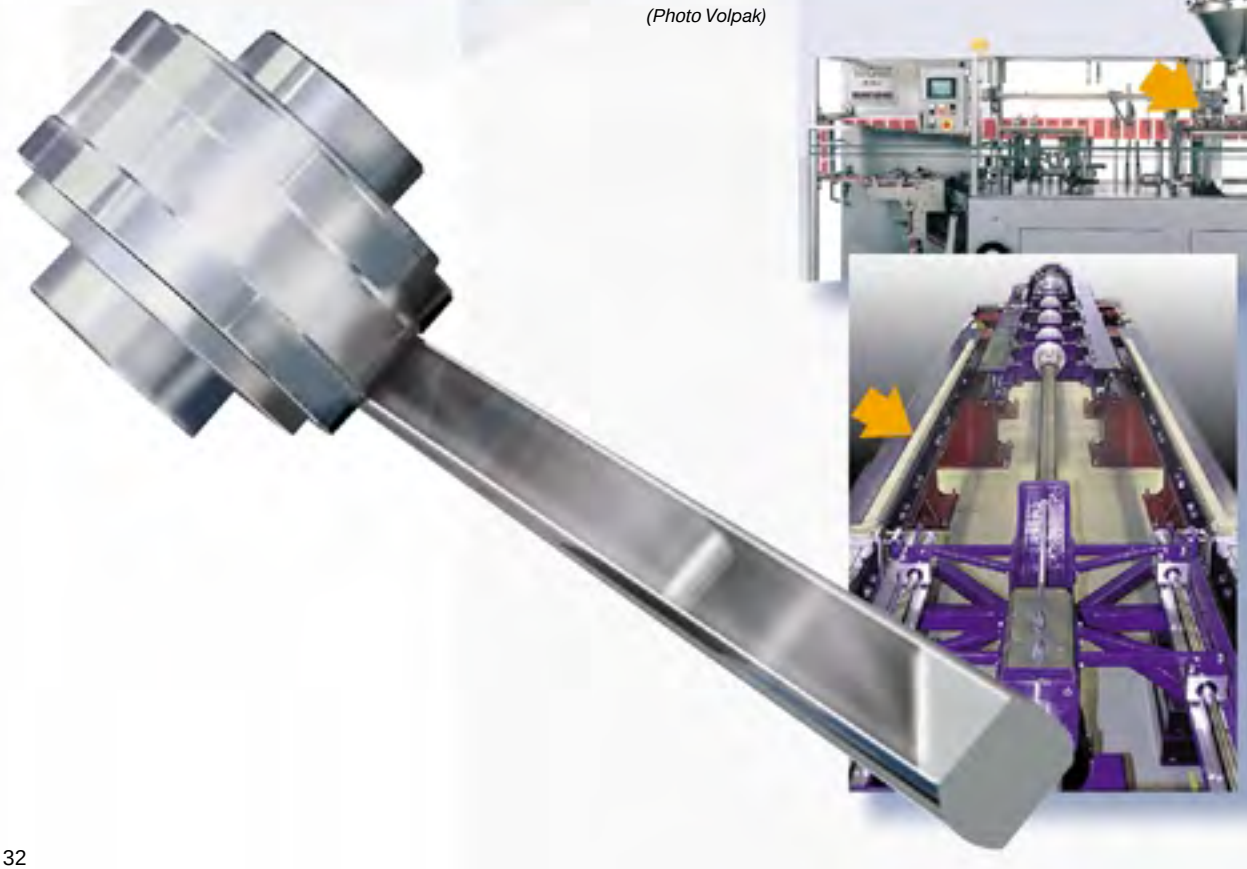
Aluminium roller guides have been sucessful in various branches and applications.

They are reliable components in machinery, packaging, food industries, handling, roboting and transport.

Take advantage of the performance and universality of Franke guide systems. We are gladly prepared to make a quotation for your special application.

Multiaxis positioning unit for a welding machine. Tools and the material can be moved individually by aluminium roller guides.

(Photo Schnelldorfer)



Aluminium roller guide in food industries. Non-corrosive components make the guide system suitable for food and packaging.

(Photo Volpak)

Coupled roller guides in a crash test application. The sledge moves with high dynamic acceleration.

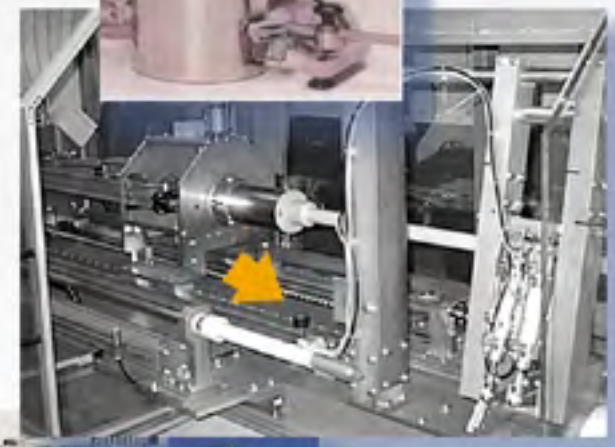
(Photo Fraunhofer Institut)

Aluminium roller guides in a welding machine. The welding head is moved horizontically with high accuracy thus enabling the machine to create small and precise welding marks.

(Photo Schnelldorfer)

Aluminium roller guide for vertcal movement of a mixer. The non-corrosive guide rail is resistant against splash water.

(Photo Disperlux)



The reel machine for synthetic skins was developped according to the state of art. Fast and easy-running aluminium roller guides are used for the central horizontal movement. The large-dimensioned running rollers which rest on needle bearings and sustain loads from any direction.

(Photo SMB)

Aluminium roller guide in a welding machine. High accuracy and low weight for perfect welding.

(Photo Meccanica)

Aluminium roller guide in a climate chamber. The guide system has to face temperatures from 0 to 90° C and humidity of 90%.

(Photo Kendro)

Linear guides with recirculating elements

Your benefit:

Low weight with guide rails made of aluminium

High conformity, high load capacity, high safety

Suitable for rough conditions, takes shocks and impacts

High stiffness due to optimized profiles and ground raceways made of spring steel

No bi-metal-effect when mounted on aluminium mating structure

Self-adjusting 4-point-geometrie takes equal loads from all directions

All rails can be coupled to endless stroke length

Raceways can be exchanged without dismounting of the rails, low maintenance costs

Technical details:

Seal:	the recirculating elements are equipped with wipers.	
Acceleration:	max. 30 m/s^2	
Traverse speed:	max. 2 m/s	
Length:	in one piece up to 4m, for longer strokes the rails can be coupled endlessly.	
Friction coefficient:	0,02. With well mounted race tracks the coefficient can be reduced after 50 working hours to 0,01.	
Lubrication:	with bearing lubrication through lubricationnipples.	
Material:	rails:	aluminium body, steel raceways
	raceway:	high alloy spring steel
	recirculating elements:	steel and plastic body

Aluminium linear guides
Components for innovative constructions

Franke linear guides with recirculating elements are perfectly suited for various applications in machinery, robots, portals and transport.

The technical features and economical benefits of Franke aluminium linear guides will convince you.

Please consult us for further information.

Technical information cassettes and roller shoes (RSP)

Consists of:
- Aluminium body
- 8 rollers in needle bearings
- Plastic plate on both front sides with felt seal (metal wipers optional, see page 60)

Features:
- Maximum load capacity, smooth and silent running
- 45° - position of the rollers for loads from all directions
- Clip-on wipers with felt seal (metal wipers optional)
- Adjustable preload
- High dynamic load capacity
- Endless stroke lengths by coupling of rails (see page 64)
- Calculation programm to find the best suitable guide size
  Our calculation programm can be found in the download area of our homepage www.franke-gmbh.com. We are gladly prepared to calculate the guide size for you.

Traverse speed:
- Traverse speed up to 10 m/s
- Acceleration up to 40 m/s^2

Temperature range:
- - 20° up to +100°C, short time operation +120°C

Lubrication:
- Maintenance-free due to lifetime-lubrication with grease Shell Retinax LX2

Fastening:
- with screws quality 8.8,
  tightening moments see Technical informations (page 64)
- Cassette with 4 fastening screws
- Pair of roller shoes with 12 fastening screws

Adjustment/Preload:
- Easy adjustment by threaded pin on the adjusting side of the cassette. Adjustment of pair of roller shoes by included adjustment plate and threaded pin. Recommended slide resistance see diagr. 1.
- The adjustment should always be done without wipers.

Running accuracy:
- The running accuracy in diagr. 3 refers to a rail length of one meter.

Stiffness:
- With pairs of single rails the stiffness refers to one pair of single rails with one pair of roller shoes (see diagr. 2).

Technical information cassettes and roller shoes (RSP)

Consists of:
- Aluminium body
- 8 rollers in needle bearings, anti-magnetic
- Plastic plate on both front sides with felt seal

Features:
- Maximum load capacity, smooth and silent running
- 45° - position of the rollers for loads from all directions
- Clip-on wipers with felt seal (metal wipers optional)
- Adjustable preload
- Endless stroke lengths by coupling of rails (see page 64)
- Calculation programm to find the best suitable guide size
  Our calculation programm can be found in the download area of our homepage www.franke-gmbh.com. We are gladly prepared to calculate the guide size for you.

Traverse speed:
- Traverse speed up to 2 m/s
- Acceleration up to 10 m/s²

Temperature range:
- - 20° up to +100°C, short time operation +120°C

Lubrication:
- Maintenance-free due to lifetime-lubrication with grease Shell Retinax LX2

Fastening:
- With screws quality 8.8,
  tightening moments see Technical informations (page 64)
- Cassette with 4 fastening screws
- Pair of roller shoes with 12 fastening screws

Adjustment/Preload:
- Easy adjustment by threaded pin on the adjusting side of the cassette. Adjustment of pair of roller shoes by included adjustment plate and threaded pin. Recommended slide resistance see diagr. 1.
- The adjustment should always be done without wipers.

Running accuracy:
- The running accuracy in diagr. 3 refers to a rail length of one meter.

Stiffness:
- With pairs of single rails the stiffness refers to one pair of single rails with one pair of roller shoes (see diagr. 2).

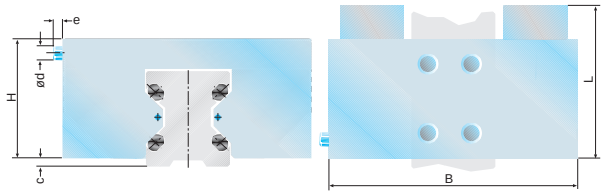
45	1000	600	36	56,2	88	47,0	13,0	8	5	

Dimensions [mm], Force [N]



MK: pneumatic
MKS: pneumatic with spring star

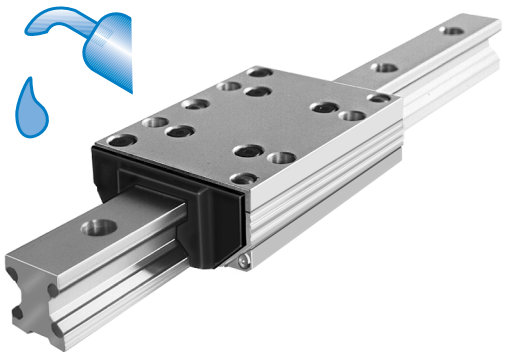
The MK is the classic clamping-element in the range of pneumatic clamping elements. The patented wedge driving gear realizes high supporting forces. The pressure medium moves the wedge driving gear in longitudinal direction; by the resulting transverse movement the contact sections are pressing with high forces against the free surfaces of the section rail guide.

Application samples:

- Table traverses and carriages
- Fixing of vertical axes
- Positioning of lifting devices
- Clamping of machines tables

Central lubrication

the re-lubricatable



Size	b	h	Lubricating nipple DIN3405	Order number
15	42,0	4,4	D1AØ3,5	**84396AF**
20	56,3	5,2	D1AØ4,0	**84441AF**
25	61,8	6,6	D1AØ4,0	**84363AF**

Technical information double rail

Consists of:
- Aluminium body
- 4 raceways made of high alloy spring steel
- plastic covers for bore holes

Features:
- fastening screw holes centered due to rail length
- other bore shapes on request. Please consult us.

Length:
- in one piece for all catalogue lengths and intermediate lengths
- for endless strokes the rails can be coupled

Fastening:
- with screws quality 8.8 and washers DIN433

Dimensions [mm], Weight [kg/m]

Technical information pair of single rail

Consists of:
- Aluminium body
- 4 raceways made of high alloy spring steel
- plastic covers for bore holes

Features:
- free selection of guide width
- the roller shoes can be placed in between or outside the rail pair

Length:
- in one piece for all catalogue lengths and intermediate lengths
- for endless strokes the rails can be coupled

Fastening:
- with screws quality 8.8 and washers DIN433

Rail body	Raceways	Fastening bores
high density anodised aluminium	high alloy spring steel	centered due to rail length

Technical information pair of single rail

Consists of:
- Aluminium body
- 4 raceways made of antimagnetic steel
- plastic covers for bore holes

Features:
- free selection of guide width
- the roller shoes can be placed in between or outside the rail pair

Length:
- in one piece for all catalogue lengths and intermediate lengths
- for endless strokes the rails can be coupled

Fastening:
- with screws quality 8.8 and washers DIN433

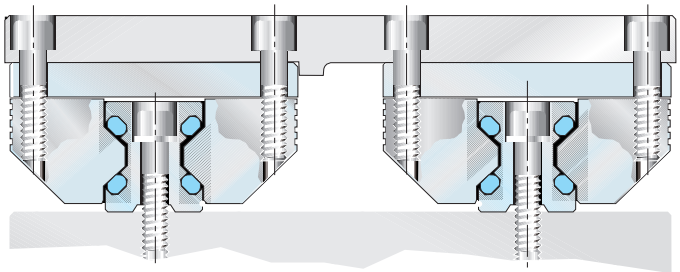
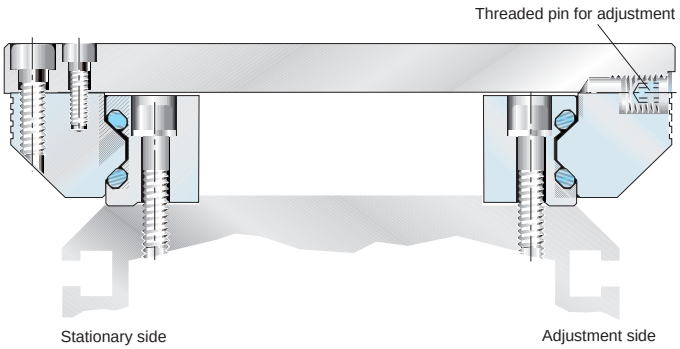
1. Construction hints

1.1 Double rail and cassette



With double track arrangement precise alignment in terms of parallelism and height is necessary.

1.2 Single rail and roller shoes



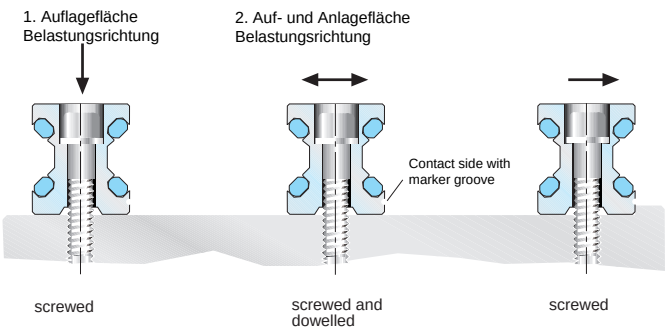
Aluminium roller guides consisting of single rails and roller shoes can be varied in the guide width. They are excellently suitable for assembly on profiled aluminium carriers, because their corrosion and temperature behaviour is homogenous.

2. Mounting instructions

The usable load capacity is influenced by the connection between the guide elements and the mating structure.

2.1 Double rails and cassettes

Depending on the load situation double rails should either be screwed or screwed and dowelled, resp. be put into grooves or against a shoulder.



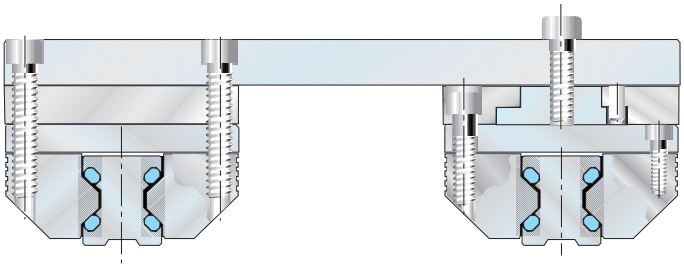
The rails rest against shoulders and are screwed resp. screwed and dowelled to the mating structure. After final checking of the linearity resp. parallelism the screws are tightened alternately from center outwards with the given torque.

Afterwards the total stroke distance is passed with the cassette. If it runs in uniform motion the mounting process can go on.

2.2 Stationary and movable rest side

With multitrack arrangement we recommend you to define a stationary and a movable side of the guide.This way tolerances in parallelism can be compensated best.

The example shows how this setup can be arranged.
Afterwards the slider is moved along the guide path. When the movement is uniform you can procede with mounting.



With this multitrack arrangement the movable side of the bearing is equipped with driver and locking device. The floating slider plate has a stationary and a movable rest side. The stationary side has the guiding function the movable side compensates tolerances in parallelism and height.

We recommend you to place the drive immediately near the guiding side because this side has to sustain the driving torque.

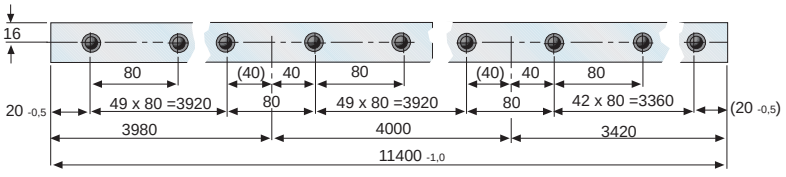
2.3 Single rails and roller shoes

Where single rails and roller shoes are used the mating structure takes the function of the slider.
The guide rails are put against the contact shoulder and screwed resp. screwed and dowelled. After final control of linearity resp. parallelism the screws are tightened alternately starting from the center outwards. Afterwards the slider is moved along the guide path. When the movement is uniform you can procede with mounting.

2.4 Spacing

Coupled rails with a length over L=4000mm resp. 6000mm are coupled together according to the Franke standard. Spacing according to the Franke standard guarantees an uniform bore shape over the whole guide and an optimum utilisation of the guide length.

Spacing according to Franke standard e.g. FDK35 - 11400



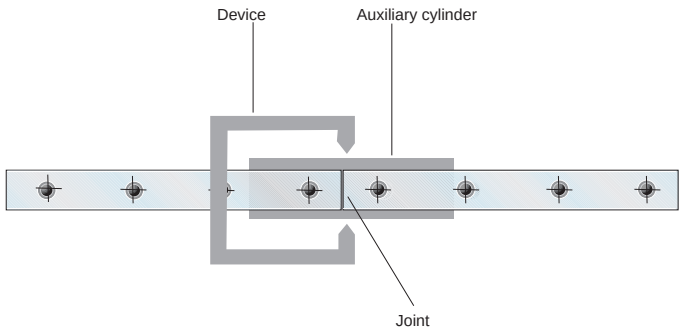
For further mounting procede as described under point 2.1.

2.5 Mounting

Clean contact and rest surfaces then put the rails lose on the guide path one behind the other one. With this the correct sequence of the production numbers has to be kept. (e.g. ....1....2....3.....4 etc.) The marking groove on the lower surface of the rail has always to be on the same side.

Now the complete guide path is aligned without gap and slightly fastened. The joints are to be aligned exactly. This is effected best by means of two auxiliary cylinders (length 200 mm). They are inserted into the raceway at the joints and clamped with a device.

For further mounting procede as described under point 10.1.



Size	Auxiliary cylinder Ø mm
12	11
15	11
20	14
25	16
35	27
45	35

3. Guide selection / Adjustment

3.1 Size of the guide system

To select the right guide size first the moments and forces acting on the bearing have to be determined. The guide size can be calculated with our calculation programm you can download from our homepage.

Recommended safety (with screws quality 8.8):
Thrust load S > 1,2
Tensile load S > 2,5
Moment load S > 4,0

Generally the first decision has to be whether the guide system should be built with double rails and cassettes, or whether individual rails with roller shoes, are to be used. Hereby there are a number of variants.

3.2 Screwed connections

The units are fixed to the mating structure by the bore holes in the rails and the guides. Hereby the srew quality should be 8.8, washers DIN433.

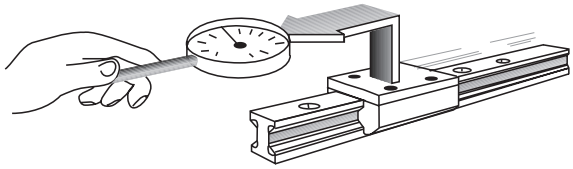
To secure the screwed connections we recommend you to use suitable locking means.

Tightening moments:

	Quality 8.8 [Nm]
M3	1,1
M4	2,5
M5	5,0
M6	8,5
M8	21,0
M10	41,0
M12	71,0

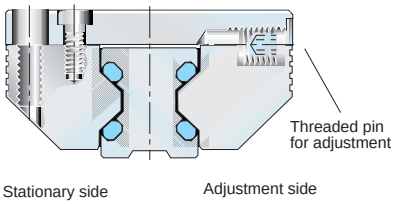
3.3 Slide resistance / adjustment

Aluminium roller guides are adjusted in such a way that the required stiffness under load is obtained. We recommend you to measure the slide resistance as shown below. However, before doing so the mating structure should be checked for dimensional accuracy and flatness.



The cassettes which are mounted on the rails are adjusted clearance-free ex works. This adjusting mode refers to the point on the rail where the cassette moves most smoothly. Adjustment is effected in the non-loaded condition. The adjustment forces are shown in the diagramms on the product pages in this catalogue.

3.4 Double rail and roller shoes



With multitrack arrangement the movable side of the bearing is equipped with driver and locking device. The floating slider plate has a stationary and a movable rest side. The stationary side has the guiding function the movable side compensates tolerances in parallelism and height.

We recommend to place the drive immediately near the guiding side because this side has to sustain the driving torque.

3.5 Single rails and roller shoes

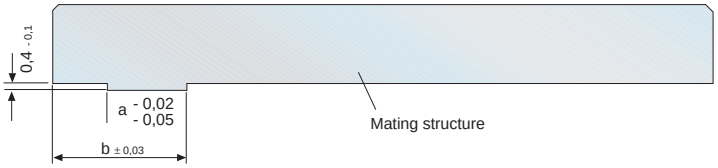
Where single rails and roller shoes are used the mating structure takes the function of the slider.

The guide rails are put against the contact shoulder and screwed resp. screwed and dowelled. After final control of linearity resp. parallelism the screws are tightened alternately starting from the center outwards. Afterwards the slider is moved along the guide path. When the movement is uniform you can procede with mounting.

Principally clearance setting is effected in unloaded condition.

Centering groove on the stationary side

The roller shoes are provided with centering grooves for better alignment during mounting. If you want to use it you need centering shoulders according to the data given below.



Size	a	b
12	4,5	9,6
15	5,0	12,6
20	7,5	16,1
25	10,5	17,6
35	12,5	26,1
45	15,5	31,1

3.6 Running accuracy

The running accuracy is measured from the screw-on-surface of the cassette to the ideal straight line of stroke. It is 0,06 mm along the whole stroke length.

3.7 Contact and support surfaces

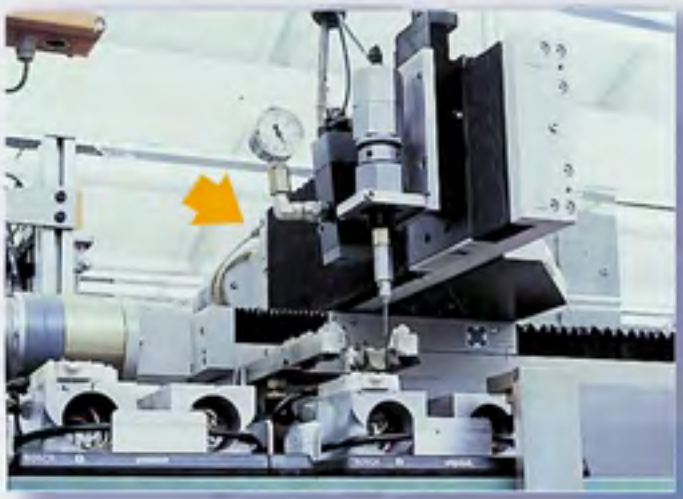
The contact and support surfaces exert an substantial influence on functioning and precision of linear guides. Depending on the functional requirements of the system the mating structure has to be machined with the corresponding degree of precision, because machining errors on the mating structure are added to the running errors of the guide system. In order to guarantee troublefree functioning we recommend to observe a max. accumulated deviation of < 0.1 mm per running meter of the guide distance on the mating structure.

Application samples
Positioning systems

Franke positioining systems comprise several series of linear modules, linear tables and rotary tables. In addition we supply precision roller tables for manual displacement. Sturdy guide blocks with or without pneumatic drive complete our programme.

The modular design of the components facilitates the set-up of multi-axis positioning systems.

Well-performing CNC control systems complete our programme offering ready to use units completely mounted and well adapted to the intended application.



Franke linear tables in a production line for motor housings. The double axis unit moves a dosing pin for sealing material which is applied to the contours of the housing parts.

(Photo SWF)

Franke linear table in a laser cutting plant. The linear table moves the machining head over the work piece quickly and precisely.The positioning accuracy is about 0.01 mm.

(Photo Trumpf/SWS)

Franke linear tables in a pin-mounting machine. The metal cover of the tables protect the guide system against pins that fall down from the mounting plate.

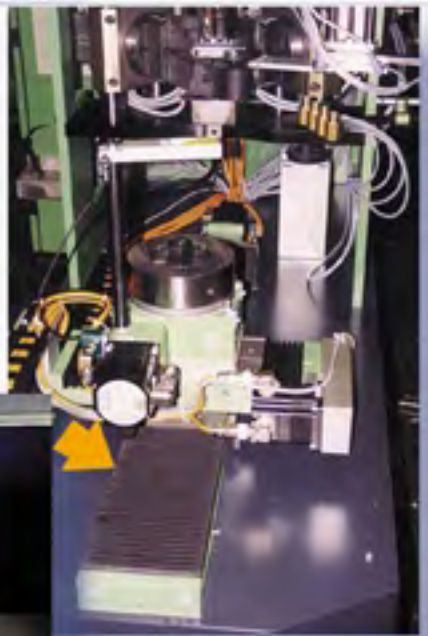
(Photo Autosplice)

Franke linear tables in a laser portal for manifold machining processes. Due to the clearance-free adjustment displacement is precise to the spot.

(Photo Siltec)

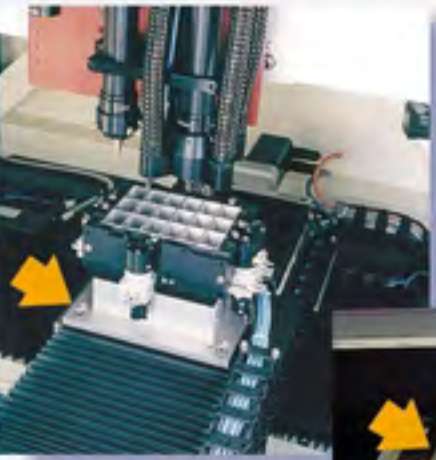
Franke rotary table in a x- ray monochromator. The heavy sample carrier is positioned by a Franke rotary table of high precision.The large center space of the rotary table facilitates easy centering of the x-ray.

(Photo Vacuum Gener.)



Franke linear and rotary tables in a laser welding machine for saw blades.

(Photo Dr. Fritsch)



Franke linear tables as multi-axis positioning system in a laser working installation.

(Photo Innolas)

Franke rotary tables for positioning climatic chambers. The investigation chamber is moved along 2 axes. The silent vibration-free run guarantees troublefree measuring results.

Dimensions [mm]

Consists of:
- Anodized Aluminium body
- External Aluminium roller guide
- Integrated toothed belt

Features:
- Fast and dynamic movements
- Light and compact design
- Cassettes with felt seal
- Strokes up to 3400 mm
- Toothed belt inside aluminium housing with steel cover

Load capacity:
- See survey on page 69
- We are gladly prepared to calculate the loads in your application

Operation temperature:
- Continuous operation: -30°C up to +80°C.

Options:
- Motor-/gear assembly by hollow shaft
- Custom specified Motor-/gear assemblies
- Motorization with stepper- or servomotors
- Counterwise actuating direction (1) or bi-parting version (2 carriers)
- Unit switches fixed at dovetail grooves
- Multi axis assemblies including intermediate drive shafts, adapter plates and profile mountings
- Solutions for integrated Automation applications including
- Franke CNC/PLC-controller (1-8 axis)

Material: Grooved profiled tube from aluminium, anodized, toothed belt from polyurethane steel cord fabric, belt wheels from aluminium, cover tape from corrosion-free tempering steel, roller guide, and slider from anodized aluminium, rolling elements from ball bearing steel 100 Cr 6, carrying rail from anodized aluminium and steel, temperature range -30°C up to + 80°C, protective system IP 54

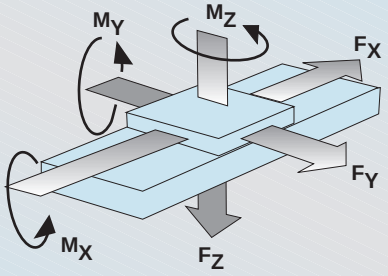
Loads, forces, and moments

The highest possible loads are given in the table above. If there are several forces and moments acting simultaneously on the guide the following equation has to be fulfilled:

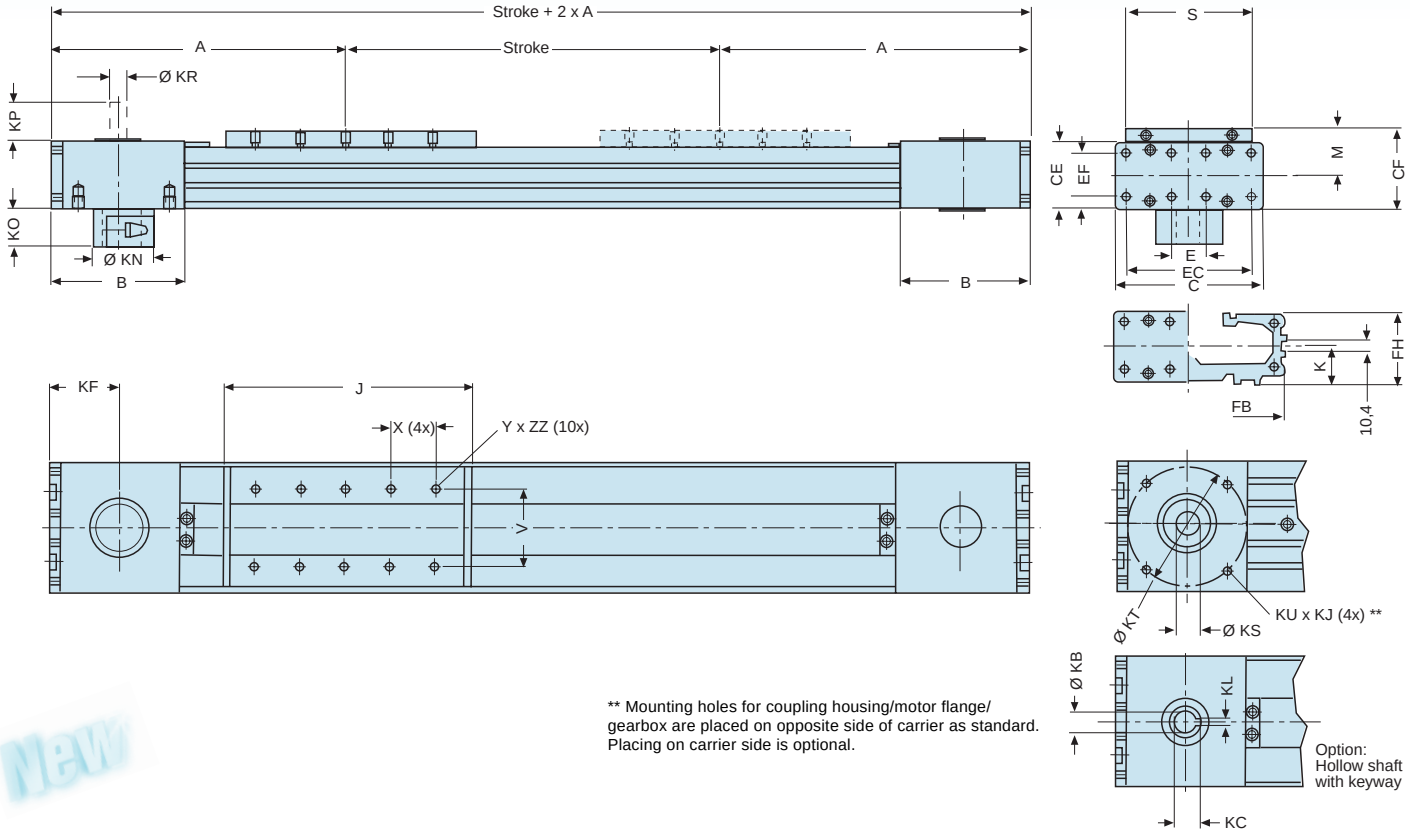
$$\frac{M_Y}{M_{Y\,max.}} + \frac{M_X}{M_{X\,max.}} + \frac{M_Z}{M_{Z\,max.}} + \frac{F_Z}{F_{Z\,max.}} + \frac{F_Y}{F_{Y\,max.}} \leq 1$$

The total of the loads is not allowed to become > 1. The table indicates the maximum permissible values for a smooth and shock-free operation. They should not be exceeded even under dynamic operating conditions.



Linear modules

Series TLH15 - 35



** Mounting holes for coupling housing/motor flange/ gearbox are placed on opposite side of carrier as standard. Placing on carrier side is optional.

Dimensions [mm] * other dimensions for KS andKB on request

Components:
- Slotted profile with dovetail grooves
- Integrated Alu-Rollerguides
- Integrated toothed belt drive

Characteristics:
- High speed and accelerations
- Compact design
- Strokes up to 7000 mm
- Ideal for multi-axis applications
- Alu-Rollerguide and toothed belt-drive in slotted profile integrated and covered with stainless steel sealing band

Loadings:
- see performance overview
  Use our technical service for calculations

Ambient temperature range:
- -30° bis +80 ° C

Mounting situation:
- anyone. For vertical movements we recommend a brake

Maintenance:
- Low maintenance caused on lifetime lubrication

Options:
- Integrated planetery gearbox
- Motor-/gear assembly by hollow shaft with keyway
- Custom specified Motor-/gear assemblies
- Motorization with stepper- or servomotors
- Counterwice actuating direction (1) or bi-parting version (2 carriers)
- Unit switches fixed at dovetail grooves
- Multi axis assemblies including intermediate drive shafts, adapter plates and profile mountings
- Solutions for integrated Automation applications including Franke CNC/PLC-controller (1-8 axis)

Dimensions [mm]

Consists of:
- Anodised body
- integrated Aluminium roller guide
- integrated linear motor
- integrated linear measuring system

Features:
- highest dynamical movements
- highest positioning accuracy
- smooth and silent running
- compact design
- strokes up to 2000mm

Guide system:
- FEA25 with two pairs of roller shoes

Drive:
- Linear motor LMA11-50

Measuring system:
- integrated inkremental length measuring system LIDA487

Limit switches:
- reed switches adjusted to end of stroke

Mounting position:
- optional

Operation temperature:
- 0° to +50°C. (other temperatures on request)

Traverse speed:
- max 8m/s

Acceleration:
- max. 40 m/s^2.

Positioning accuracy:
- -+/-15µm (due to the operating measuring system)

Repetitive accuracy:
- -+/-10µm (due to the resolution of the measuring system)

Maintenance:
- low maintenance costs due to lifetime lubrication of the guide system

Optional:
- complete positioning system including Franke CNC-control unit.

Linear motor: The dynamics of movemt is considerably increased by the use of linear motors. Where no mechanical driving units like spindles or toothed belts are used the movement is effected directly.

As attachment parts like flanges and clutches are not necessary we built very compact linear tables with linear motors. There are no disturbing parts. If you are interested in a table with linear motor please consult us. We are prepared to advise you.

Dimensions [mm]

Consists of:
- Anodised body
- integrated Aluminium roller guide
- recirculating ball screw spindle drive

Features:
- light and compact design
- smooth and silent running
- metal cover, metal strip
- strokes up to 700mm

Spindle:
- preloaded ball screw spindle, 5mm pitch
- other spindles on request

Mounting position:
- optional, with vertical position we recommend a brake

Positioning accuracy:
- due to spindle pitch +/-0,05/300mm
- other accuracies on request

Repetitive accuracy:
- < 0,01mm

Lubrication:
- lifetime lubrication with bearing grease (see page 98)

Load capacity:
- see table (loads, moments)
- with loads without acceleration or moment loads static safety S >3. with dynamic moments S >6. We are gladly prepared to calculate the static safety and lifetime in your application.

Operation temperature:
- -10° to +75°C (other temperatures on request)

Options:
- limit switches integrated inside the table
- reference switches
- adapting plates for motors of your choice
- other motors
- complete positioning systems including Franke CNC-control units and software (1-8 axes), see page 90-91.
- Please consult us.

Dimensions [mm], Weight [kg], Load rating [N], Moments [Nm]

Open roller table for jigs and fixtures and reference gauges. Suitable for adjustment and compensation movements in the mounting and measuring technique.

Running accuracy:
0,004 - 0,006 mm

Dimensions [mm], Weight [kg], Load rating [N], Moments [Nm]

Consists of:
- Aluminium body
- Franke 4-point system

Features:
- for high loads from all directions
- highest accuracy
- compact design

Spindle:
- preloaded ball screw spindle, (pitch see table)
  other spindles on request

Running accuracy:
- 0,004 to 0,01mm

Fastening:
- standard bore shape on both sides
- the table can be mounted upside down

Load capacity:
- see loads and moments in the tabel

Operation temperature:
- 0° to +70°C

Mounting position:
- optional

Lubrication:
- by lubricating the ball cages (see page 98)

Tolerances:
- all dimensions DIN7168 medium
- height DIN7168 fine

Traverse speed:
- max. 1,5m/s

Adjustment:
- free from clearance ex works
- adjustable by threaded bolts

Material:
- table body made of aluminium
- raceways made of high alloy spring steel
- balls made of steel

Cross tables

Dimensions [mm], Weight [kg], Load rating [N], Moments [Nm]

Consists of:
- Aluminium body
- Franke 4-point system
- scale and clamp

Features:
- for high loads from all directions
- highest accuracy
- clamping by screws

Running accuracy:
- 0,005 to 0,01mm

Fastening:
- lower part countersunk
- upper part tapped holes

Load capacity:
- see loads and moments in the tabel

Operation temperature:
- 0° to +70°C

Mounting position:
- optional

Clamping:
- by screws on the scale plates

Scale:
- 1mm

Lubrication:
- by lubricating the ball cages (see page 98)

Adjustment:
- free from clearance ex works
- adjustable by threaded bolts

Material:
- table body made of aluminium
- raceways made of high alloy spring steel
- balls made of steel

Dimensions [mm], Weight [kg], Load rating [N], Moments [Nm]

Consists of:
- Aluminium body
- Franke 4-point system
- spindle, scale and clamp

Features:
- for high loads from all directions
- highest accuracy
- precise spindle drive

Running accuracy:
- 0,004 to 0,006mm

Fastening:
- standardized holes in the upper and lower part
- fixation either from above or from below

Load capacity:
- see loads and moments in the tabel

Operation temperature:
- 0° to +70°C

Mounting position:
- optional

Clamping:
- Our clamping device for the location of the movable part is designed in such a manner that the antifriction guide is not loaded. Where the clamping device is desired the order number should read **No. ...B.**

Scale:
- 0,02 mm

Lubrication:
- by lubricating the ball cages (see page 98)

Spindle pitch:
- 1,00 mm

Spindle precision:
- ≤+/-0,03/300 mm Stroke

Adjustment:
- free from clearance ex works
- adjustable by threaded bolts

Tolerances:
- all dimensions DIN7168 medium
- heigh DIN7168 fine

Material:

table body:	made of aluminium
raceways:	made of high alloy spring steel
balls:	made of steel

Dimensions [mm], Load rating [N], Moments [Nm]

Consists of:
- Steel body
- Franke 4-point-system

Features:
- for high loads under rough
- adjustable stop screws

Running accuracy:
- > 0,1 mm. Measured from screw-on surface of slider part to the ideal straight line of stroke.

Fastening:
- Screw quality 8.8, with max. load 12.9

Load capacity:
- See load rating in the table. We shall be glad to make the calculation of load capacity and lifetime for you.

Acceleration, retardation:
- max. 25 m/s^2

Mounting position:
- with inclined position >30° we recommend type V05 with cage return device.

Stroke limitation:
- by stop screws. The carriage should run against the screws only with low residual energy.

Friction coefficient:
- under load with grease lubrication 0,01.

Lubrication:
- Lifetime grease lubrication ex works.

Traverse speed:
- max. 1,5 m/s

Preload:
- unless other instructions are given the units are adjusted with
- preload in our works.

Material:
Carriage/slider part: made of steel

Further information:
technical information see page 98.

Dimensions [mm], Weight [kg], Load rating [N], Moments [Nm]

Consists of:
- Aluminium body with metal cover of non-corrosive steel
- integrated Franke bearing with worm gear
- big dimensioned worm drive for long lifetime

Features:
- light and compact design
- suitable for high revolutions
- high load capacity
- center-free construction

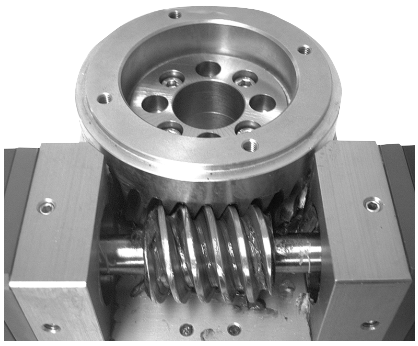
Load capacity:
- see load rating in the table
- static safety without levers and moments S >3, static safety with levers and moments S >6.
- we are gladly prepared to calculate the loads and lifetime for your application.

Operation temperature:
- -10° to 80°C°
  other temperatures on request

Options:
- 1 or 2 limit switches inside the table body with free adjustable control
- cams
- mounting flanges for special motors
- stepping or servo motors according to your application
- resolver placed on the other end of the gear shaft
- complete positioning systems including Franke CNC-control unit and software (1-8 axes), see page 90-91. Please consult us.

Lubrication:
- with bearing grease according to our maintenance instructions

Material:
Basic body: aluminium
Raceways: high alloy spring steel
Balls: steel
Worm gear: steel-bronce
Worm shaft: CK45N, ground and hardened
Housing: non corrosive steel



High performance worm gear drive in compact design

Dimensions [mm], Weight [kg], Load rating [N], Moments [Nm]

Consists of:
- Aluminium body with metal cover
- High precision worm drive

Features:
- Light and compact design
- High stiffness
- High accuracy
- Center-free construction

Load capacity:
- see load rating in the table. For best accuracy und lifetime we recommend a static safety of S≥3. We are gladly prepared to calculate the load situation of your application for you.

Adjustment:
- Antifriction bearing and precision worm gear are adjusted without clearance.

Lubrication:
- with bearing grease according to our maintenance instructions

Options:
- 1 or 2 limit switches inside the table body with free adjustable control cams
- mounting flanges for special motors
- stepping or servo motors according to your application
- resolver placed on the other end of the gear shaft
- complete positioning systems including Franke CNC-control units and software (1-8 axes), see page 90-91. Please consult us.

Material: Table body: aluminium
Raceways: high alloy spring steel
Balls: steel
Worm gear: steel-bronce
Vaccuum and partly non-magnetic version on request

Dimensions [mm], Weight [kg], Load rating [N], Moments [Nm]

Consists of:
- Aluminium body with metal cover
- High precision worm drive

Features:
- Splash water resistant
- High stiffness
- High accuracy
- Center-free construction

Load capacity:
- see load rating in the table. For best accuracy und lifetime we recommend a static safety of S≥3. We are gladly prepared to calculate the load situation of your application for you.

Operation temperature:
- -10° up to +80°C. Other temperatures on request.

Adjustment:
- Antifriction bearing and precision worm gear are adjusted without clearance.

Lubrication:
- with bearing grease according to our maintenance instructions

Options:
- 1 or 2 limit switches inside the table body with free adjustable control cams
- mounting flanges for special motors
- stepping or servo motors according to your application
- resolver placed on the other end of the gear shaft
- complete positioning systems including Franke CNC-control units and software (1-8 axes), see page 90-91. Please consult us.

Raceways: high alloy spring steel
Balls: steel
Worm gear: steel-bronce
Vaccuum and partly non-magnetic version on request

Motorisation

AC-Servomotor Typ DBL.....

- Neodynium magnets for highly dynamic function
- Long life by virtue of brushless design
- Built-in Resolver
- Low motor inertia
- Vibration class N according to DIN ISO 2373
- Insulation material class F according to DIN 57530
- Protection class IP 64
- Integrated soccets for resolver and power connections
- CE-conformity

Single axis CNC-controller
Type TSC100-Servostar...

- wide range of mains supply voltage
- up to 20 Amps with integral mains filter
- all CE, UL and cUL conformities
- 2 analog inputs
- 6 digital in-/outputs
- feedback from resolver or high resolution sin/cos encoder
- integrated interface for stepper controllers
- CAN-Open intrgrated
- fully programmable RS323 interface
- Integrated position controller with memory for 180 motion tasks
- integrated interface for stepper controllers, master-slave, electrical gear, ...
- extension soccets for PROFIBUS, I/O-extension, SERCOS, ... (optional)

Dimensions [mm], Weight [kg]

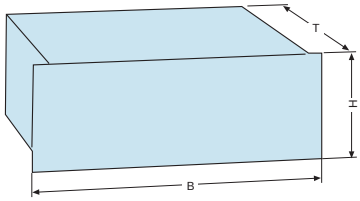
Continuous path control Type TSC320 (1-3 axis)

- Continuous path control unit to control 3 power amplifiers for stepper motors or servo motors
- Up to 3 integr. amplifiers for Servo- or stepper motors
- Integrated operating panel with foil keyboard, LCD display
- Emergency power off module
- menu driven user interface (multisignal)
- Command set for program flow control, register arithmetic, text display
- Axis management with linear-, circular- and helix-interpolation
- Integrated PLC device
- Encoder interface for incremental or absolute path measuring systems
- 20 opto decoupled inputs, 32 outputs, (24VDC max. 300mA)



Typ	Features	Dimensions			Weight	Order number
		Height (HE)	Width (")	Deep (mm)	(kg)

Dimensions [mm]

Continuous path control Type TSC400 (4-8 axis)

- Continuous path control unit to control 4 or 8 power amplifiers for
- stepper motors or servo motors
- Menu driven user interface with 7-inch screen or LCD-display
- Command set for program flow control, register arithmetic, text display, cutter compensation and engraving commands
- Axis management with linear-, circular- and helical-interpolation electrical gears and counter axis
- Program management on memory card 32kB to 256KB
- Integrated a PLC device (SM2) can be integrated
- Encoder interface for incremental path measuring systems
- 16 opto decoupled inputs and 8 relay outputs
- expandable up to 64 inputs and 64 outputs
- Analog voltage signal ±10V DC
- Clock signal and direction signal up to 30 kHz

Dimensions [mm]

For electrical sensing of the carrier position, e.g. at the end positions, proximity sensors may be fitted.
Position sensing is contactless and is based on magnets fitted as standard to the carrier. A yellow LED indicates operating status.
Type RS: In the type RS contact is made by a mechanical reed switch encapsulated in glass. Direct connection with 2-pole cable, 5m long, open ended (Type RS-K). With 3-pole connector M8, cable length ca. 100mm (Type RS-S).
Type ES: In the type ES contact is made by an electronic switch - without bounce or wear and protected from pole reversal. The output is short circuit proof and insensitive to shocks and vibrations. Connection is by 3-pole connector for easy disconnection. Fitted with connection cable 100mm long with connector.
A 5m cable with connector and open end can be ordered separatly.

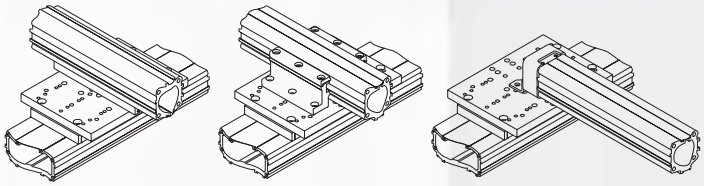
Electrical Service Life, protective Measures: Magnetic switches are sensitive to excessive currents and inductions. With high switching frequencies and inductive loads such as relays, solenoid valves or lifting magnets, service life will be greatly reduced.
With resistive and capacitative loads with high switch-on current, such as light bulbs, a protective resistor should be fitted. This also applies to long cable lengths an voltages over 100V. In the switching of inductive loads such as relays, solenoid valves and lifting magnets, voltage peaks (transients) are generated which must be suppressed by protective diodes, RC loops or varistors.

Application Examples Linear modules

Multi-axis-support

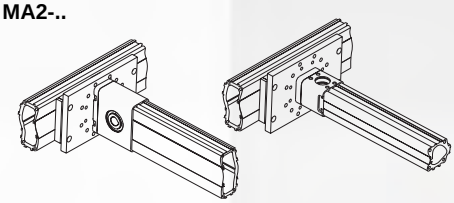
Adapting plate type MA1-..

for adapting of slider to slider,
slider to profile or slider to end cap



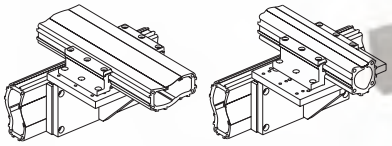
Adapting plate type MA2-..

for adapting of slider
to end cap

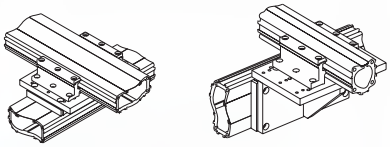


Adapting plate type MA3-..

for adapting of slider to profile
or slider to end cap with 90° degree angle



Profil mounting type MAE-..



Linear modules, Series TLP15 - 25

Dimensions [mm]

Cover fixtures, central support

At the end covers there are four inner threadings each in the front sides for fixation of the module. The distance between the holes is square so that fastening can be made either from the bottom, from top or laterally.

The cover fixtures consist of galvanized steel, the central supports are made of aluminium.

Motor fixtures, clutch housing

The the clutch housing is the basis for the assembly of the motor.
The following motor fixtures are designed for the available packets of acutators and stepping motors consisting of clutch housing, motor flange and clutch.

The motor flange can be optionally supplied without bore holes to allow any other bore configuration for other motors which might be desired by the customer.

Technical Information

Linear tables, rotary tables

References switches, measuring system: The standard version of our linear tables is equipped with inductive limit and reference switches PNP-nc 10-30 VDC. Optionally PNP-no NPN-no and NPN-nc - switches are available.

The attachment / integration of a length-measuring system with sinusoidal or rectangular signals is possible on request. Encoders can be mounted on the motor. We will be glad to consult you in finding the system appropriate for your application.

Multi-axis units: Franke-linear and rotary tables can easily be combined to multiaxis units. The angles and adapterplates which are neccessary for the mounting of the units will be constructed according to your requirements. We deliver completely mounted units cabled and adjusted, on request with further accessories.

Motors: many types of stepping and servomotors can be connected with our linear and rotary tables. Flanges and clutches are to be modified respectively. The customer can contribute own motors as well.

Motor reversal, gear: In our standard version the motor is mounted in extension of the stroke axis. Motor reversal via toothed belt or reversal gear can be supplied for special applications e.g. with limited mounting space.

Maintenance, lubrication: It is indispensable to supervise the bearings in the linear and rotary tables for lubrication. Relubrication periods depend on the environmental conditions and are mainly influenced by the ageing properties of the lubricant. For longtime lubrication completely synthetic lubricants are to be preferred. In our works we use the completely synthetic special grease ISOFLEX TOPAS NCA 52 (make KLÜBER) As alternative we recommend high-grade greases of lithium soap based on of mineral oil.

Where lubricants are to be mixed up the consistency regarding kind of basic oil, thickener, basic oil viscosity and NLGI class has to be ensured. With extreme operating conditions (vacuum, radiation, high temperatures) we recommend you to consult us or a lubricant producer.

Franke linear tables: Franke linear tables are almost maintenance-free. Except for the ball screw our linear tables get a lifetime lubrication in our works. Under normal operating conditions the ageing resistance of the lubricant exceeds the lifetime of the table. Ex works the ball screw is provided with a grease filling which is not a lifetime lubrication. It is a fact that some grease will leak by the ball screw shaft, therefore relubrication is necessary depending on the application. We recommend you to relubricate with about 1-2g grease after about 700 operating hours. In context with the relubrication we recommend you to check the inner space of the table and the guide paths for contamination and to clean them if possible. With this we recommend you to apply some grease to the guide paths.

Franke rotary tables and goniometers: Generally all standard roatary tables are provided with long time lubrication ex works. Depending on the application we recommend relubrication every 6 -12 months. The quantity for relubrication should be as follows (approximate values in g per lubricating point):

Lubrication	left	right	top	bottom	sidewise
TSD175S	1	1	3	2	-
TSD265S	1	1	3	2	-
TSD400S	1	1	4	3	-
TSD125M	-	-	-	-	3
TSD175M	-	-	-	-	3
TSD400M	-	-	-	-	4
TSD830M	-	-	-	-	4
TSW	cover teeth gaps (all sizes)				

1. Accuracies

Running accuracy: The running accuracy is defined by the highest possible deviation of an optional point on the moven table surface from the ideal straight line when traversing the total stroke distance (responding to the accuracy of the substructure). **Positionning accuracy:** The positioniong accuracy is defined by the deviation from a pre-selected point which is approached by a previously defined reference (zero) point. **Repetitive accuracy:** The repetitive accuracy is defined by multiple exact approaches at a preselected point which has to be reached. For the exact repetitive approach at programmed coordinates a reliable measuring system with direct measurements is of importance. **Resolution:** The resolution is defined by the smallest possible traverse distance of a positioning unit. It is determined e.g. by the spindle pitch, transmission, stepping angle, division of the measuring system. By means of the resolution deviations in the positioning and repetitive accuracy can be neutralized. Therefore the resolution should always be higher than the deviation from the permissible positioning accuracy.

2. Linear tables

2.1 Design
Franke linear tables are designed for the application in automation for the measuring and testing sector as well as for rationalization in handling and mounting. The selection range includes strokes from 40 mm up to 1200 mm, the movement is effected by means of a spindle. The ribbed aluminium structure in combination with the Franke guide system allows high load rating and moment loads whereas the weight is extremely low.

2.2 Limit switch/reference points
Franke linear tables of series TSL06U-16M are equipped with a cam strip and continuous control cams on the outer side of the slider part. Setting of the cams according to the required reference points and changing of these points is possible without dismantling the table. The limit switches of the tables TLA and TLL are in a fixed position which is adjusted for full stroke length. Lineartables series TSL06L are equipped with moveable control cams which are placed at the right slider part underneath the side cover. To adjust the cams the side cover has to be dismounted. After adjusting the cams the fixing of the side cover fastener the cams.

3. Rotary Tables

Franke rotary tables are compact and have high load capacity. They are particlularly used for mounting, measuring, and testing operations. The high-grade wormgear guarantees high precision in permanent operation. All rotary tables are equipped with aluminium housings, the integrated Franke guide system makes them extremely resistant to tilt while their own weight is very low. **Please make use of our mounting and maintenance instructions which come with every consigment.**

Linear modules, Series TLP15-25

Necessary torque

The size of the linear drive and the necessary torque can be determined by using the known mass, the mounting position and the desired acceleration according to the following diagrams. The mass on which the diagrams are based is composed of the external mass and the movable mass of the linear drive.

Please notice:
Whore an additional guide is used the mass of the slider has to be taken into account.

Central supports
(Explanations see page 79)

From certain stroke lengths central supports are necessary to avoid deflexion and vibrations caused by the drive. The diagrams show the max. support width responding to the load. We have to make a difference between load example 1 and load example 2. Deflexion of max. 0.5mm between the supports is not permissible.

Please observe the separate mounting and maintenance instructions which are enclosed to every consignment.

"Welcome to Franke"

Our service team is at your disposal from the inquiry to the delivery. Competent staff members provide a trouble-free handling of your orders.
Should you for once not be satisfied please let us know. We shall look after your problems.

Our team for inquiries, quotations, orders for antifriction bearings, linear guides

In the distribution department many strings come together. Our team is willing to give you the best service possible.

Advicing, calculating, taking up and passing on of questions, keeping contact, informing, co-operating, coordinating, checking, correcting, supervising..... all that in a friendly tone.

Please contact our specialists. We shall be glad to do our best to handle your questions, problems and desires. Tell us what we can do for you.

Looking ahead with well defined aims

The management of the Franke GmbH is leading the enterprise with clear strategies and responsibility. The leading heads from the left to the right:

Gerhard Groz	(managing director)
Siegfried Balle	(managing clerk, purchase)
Harald Müller	(managing clerk, production)
Günter Fischer	(managing clerk, distribution)
Jörg Egelhaaf	(managing clerk, marketing)
Michael Helbig	(managing director)

Customer service Mounting/Maintenance

Do you need technical assistance at your place? No problem. Our maintenance men and technicians are glad to help you. They give you hints for handling and fitting of our components and are prepared to lend you a helping hand. Our service shall be to your full satisfaction from the very beginning.

- a selection of dxf-files for your CAD-system
- calculation programms to select the right bearing our guide size

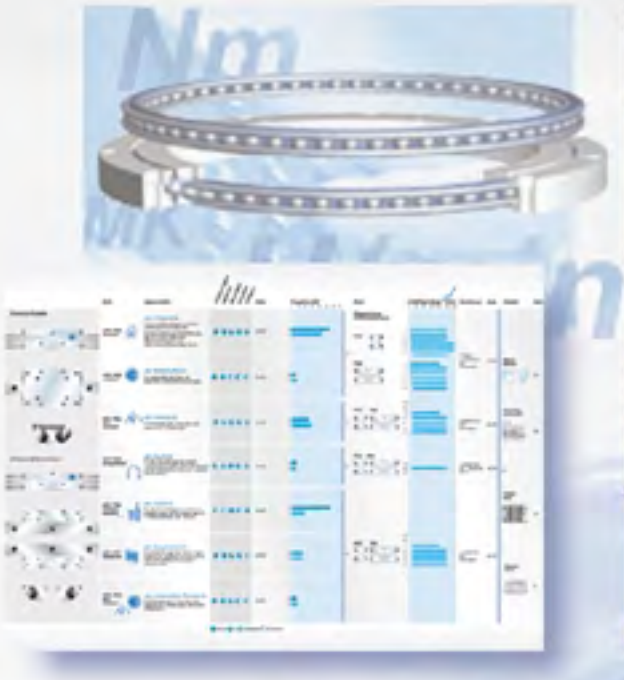
eShop

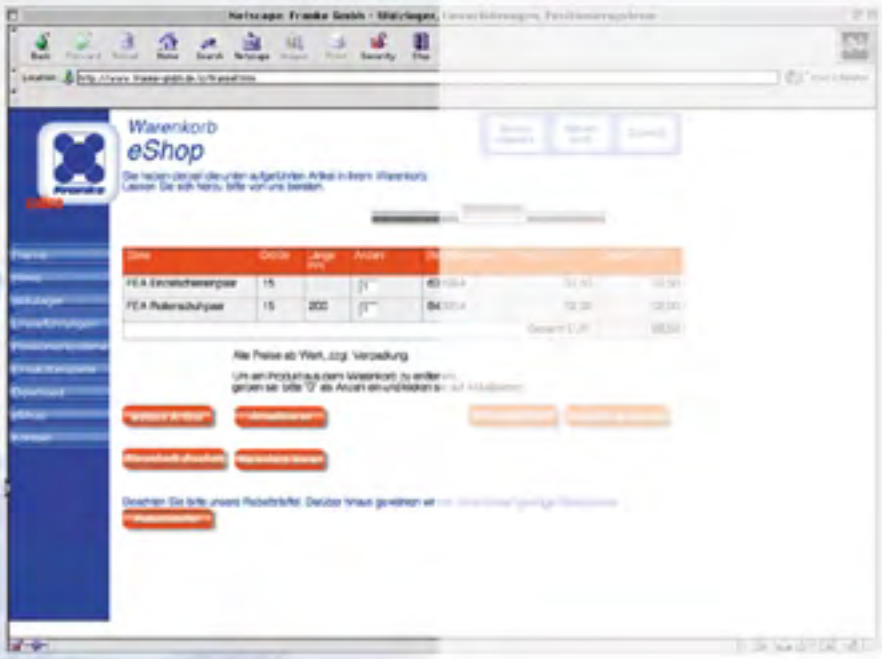
In our e-shop for aluminium roller guides you can select the suitable guide size easily and place an order or inquiry. Interactive drawings and step-by-step-menues guide you through the site.

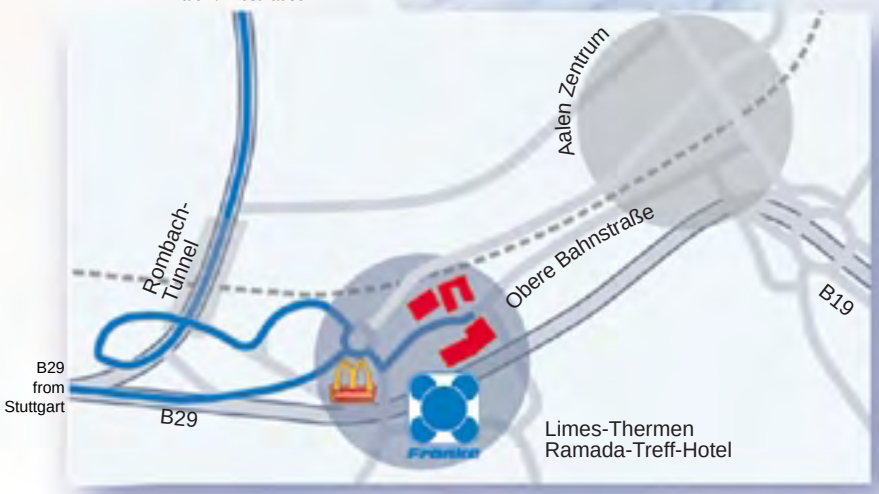
up to date information and costumer service

Our homepage www.franke-gmbh.com provides you with many useful features. The contact side will show you the people you can get in touch with, the list of representatives all over the world and how to reach our facilities.

www.franke-bearings.com will tell you more about the invention of the wire race bearing and what the special features of this kind of bearings are.







How to find us ...

From the A 7 exit Westhausen ...
turn in the direction of Aalen (B29), after ca. 8 kilometers you will drive through the Rombach-tunnel. Turn right after the tunnel and then left direction "Zentrum". You will reach a roundabout where you take the second exit in direction to the Jet-fuel-station. After 50m you turn left and will find Franke around 300m down the road.

A7
Exit
Aalen / Oberkochen

From Stuttgart
take highway B 29 to Aalen,follow the signs in the direction "Zentrum". You will reach a roundabout where you take the exit in direction to the Jet-fuel-station. After 50m you turn left and will find Franke around 300m down the road.
